To

Dr.Nelson Mandela,

P.O.Box 61884

Marschall Town 2107. Chau

South Africa

Dear Dr. Mandela,

Enclosed I send you a copy of the circular letter I am sending out to the leading mea in 70 countries, including of course, also Mr. de Klerk.

I do not know whether you have in South Africa also a very strong Lobby which stopsall endeavors to let the public know about the danger resulting from the exposure to earth and other radiations, but I hope that you will insist on an early solution thus avoiding that small babies are the victims of the fact that their parents ignore what to do.

Wishing you plenty of success in your future steps, I remain,

Dear Mr. Mandela,

Yours singerely

%

Pablo Frolich

President of the Foundation for the

Protection against Earth Radiations.

In order to expedite the general knowledge of the population with regard to the danger resulting of the exposure to the so-called "earth radiations" I wrote a circular letter (of which I enclose a ar translation) to many thousands of students in the German speaking iartseof Eurdpe asking them to exhibit it on the black board of, their university or their student home.

The contents may interest you and I do hope that you are seriously considering the necessary announcement to your population thus , . avoiding diseases which might be cured by simply moving away from geopathic spots or, if the available space does not allow it, by making use of a defence.

The moving away from a trouble spot is, of course, of particular importance as to the cot of a small baby, gsuch as I wish to empha-size once more thus freeing their parents of ther fright of losing their healthy child.

The famdus expert of Brazil, Dr. Marcondes, is cdntinually speaking on the TV about that danger and the authorities of that country have already stated a considerable reduction of diseases.

I remain with kind regards

Yours sincerely

Pablo Frblieh

President of the Foundation for the  
Protection against Earth Radiations.

1, Enclosure.

Griindungsmiiglieder: '

Pablo Fr6lich, Bod Rogoz Josef von Glotfer-bez, Schwarzoch (A)

Reinhold St6ckler, Meilen Dr. med. Werner Wiffwer, Bolgoch

To the Students of all branches in Y6ur city.

Dear young friends, Those who do not give thought of the danger that is caused to our immun system by expoSure on a geopaducalb disturbed spot are either ignorant or stupid. This is all the more so if one considers that for most people it is easy to find this out oneself without incurring any costs.

I affirm that in more than 80% of all cases of cancer the cause has been given by such contacts and I also affirm that even with the best medical Care a person suffering cancer has hardly the chance to recover whilst still being exposed to such influences.

Already in the year 1929 the dowser v.Pohl proved in Vilsbiburg (Germany) that all cases of cancer during the previous 10 years had been exposed ;; to such geopathic influences, and 2 years later the sanitary doctor Hager in Stettin (Germany) also came to the sad result when checking the cases of cancer of the previous 20 years.

It is a great pity that one did not officially check all cases of cancer with the corresponding statistics such as I have proposed to 70 heads of State in different languages at the beginning of June 1993 in order to get concrete details proving that danger.

If one feels 100% fit therefore believing that one can skip such a control that person is absolutely wrong because it is known that many kinds of cancer can only be traced after years with the normal procedure and by then it may be too late.

Or let us take the cases of SIDS (sudd31lnfant death syndroma, that means cases of perfectly healthy children of less than one year of age who in the morning are found dead in their cot. All theSe cases are duato the same harmful exposure.The Germany professor Uiblacker has been giving these cases of SIDS special attention finding out that over many years of re-search there is no doubt left and moreover he discovered that the ideath occurs during the period of 3 days before full moon up to 2 days afterwards so that one can speak of various causes.But if in all these cases it was proved that the bed had been exposed to geopathic influences, well, the it is absolutely stupid to ignore this advice to avoid such a spot and fearing for the life of the baby every night.

For me it is not a case of science but of experience for which reason I give everybody the advice to find this out by themselves as to whether they are exposed to such dangerous influences, The enclosed circular letter "Information April 1993" gives details about it and if you find out that many complaints such as pain in the back, headaches or sleeplessness etc. disappear when moving\_away from such trouble spots (which is much better than making use of any defence) then you have the best proof for such an assertion.

I direct this announcement to you hoping that you will understand it and contribute to its general knowledge.

With kind regards

Pablo Frolich

not: a petition not. propaganda

just useful advice

.21 QuLyour health!

Dear Reader,

Get deaths: Professor Dr.-Ing. Karl Uiblackner of Lehrte/Germany contributed to the ouoceoa of the international congreoa of the radiation apeoialioto in Foz do Iguazu (Brazil) last December. He stated that in all the fatalities investigated it was found that the cot had stood in a place subject to Earth radiation. It in a quootion of a multi-fuctor misfortune occurring in the period 3 days before the full moon and for up to 2 daya afterwards. HOWover, since Earth radiation could always be demon- strated, it clearly indicate: that all parents should devote their full nttention to this phenomenon so that they do not have to worry about the life of their healthy offspring at night. cancer: In practically all oases of cancer, the presence of Earth radiation has Likewise been demonstrated 50 that everybody should make sure that he or she is not exposed to this radiation for many hours during the day or night.

other diuoluoa: These can also often be attributed to the effect of radiation on the particular location, whether this is a question of minor complaints such a3 lack of concentration, migraine or insomnia or other disorders from aathma to arthritis or oven miscarriages. Many road accidents at quite specific points exposed to radiation are due to the same cause.

I hope that this introduction has made you sit up and take notice and that you now no longer consider the aubjcot of Earth radiation to be the domain of smart dowaars (among whom there are unfortunately also many roguoa).

But don't worry, I will not loavo you in mid-air but will tell you how you yourself can determine the presence of such radi- ation and, if necessary, what you can do to pretoct yourself from it. Carefully read the following remarks. You don't ovan have to be convinced by them since I challenge you to go on your own voyage of discovery in your OWn home and at friend; 9nd acquaintances and particularly where cancer patients are llvng or have lived and where a cot death has occurred. The latter case i6 especially easy to oheck sine. the specific place where the cot was positioned can be acouratoly localized evon-years afterwards.

Do not be ourprised if in many cases the headache or insomnia diou pears already within ono or two weeks. However, ploaae do not ?orget either that when you spend a long time at a uleturb- ance oentro the cancer can be dovolooping although you otlll feel quite fit and the conVontional cancer screening has not ohown any signs at all but that aftor the elimination of tho dleturb- once there is a very good chance that a rewinvl orated immune system can bring about a positive change, espec ally when you try to overcome the weaknoea by a healthy way of llfe, i e., a diet without excessivo fat, a Very low alcohol intake and no l l harge a

amokin at all. It 18 quite wrong, of oourae, to date oanoorgpatient from hospital without udvlaing him of the need to carry out a check at home or at him place of work since other" wine the success of the troatment 13 very questionable since the patient will again be at riok'from the radiation.

u..-\_\_..\_\_\_\_.

-----

quantification of the disturbance contours I would like to mention the flower method. You fill a number of identical bottles with the same quantity of water and place in each one a flower, of the same kind. You then put these bottles at the places which you want to check, i.e., in particular where your bed is located and not just one bottle but 5, 6 or 7 bottles. A bottle which is in an endangered Pinon unan may wither sooner than the others. About the second method I would like to talk about pendulum swinging. I know that you will say immediately that you can't do it but in the last few years I have persuaded thousands to try it and have found that 80% of all persons can in fact do it once they have given up their negative attitude and have been shown how to go about it. Through my honorary activities in this foundation since the death of my wife from cancer, I can certainly affirm this. Admittedly, you will not yet be able to compete with an expert but that is not at all necessary either. You do not even need a special pendulum. An improvised pendulum, made in a second by taking your necklace with a charm or a thread or a little chain and suspending a small object from it, such as a ring, is enough. You now cause the pendulum, in a length of about 12 cm cut 5 inches, to swing backwards and forwards, i.e., it must not rotate at all. You then ask yourself, in your mind or out loud, "Is this place good?". If a slight clockwise rotation then occurs, the answer is positive. If, however, the rotation is anticlockwise, a disturbance can be assumed. No rotation occurs at transitional places (with a very few persons, the reaction is the other way around). Disturbance centres can also be found by watching animals since all animals are instinctively aware of them. Only we modern people are so "dormant" that we have lost this subtle feeling. The exception to this, however, are small children who cry much more often at disturbance centres or move around at night in their cots so that in the morning they are found in a corner or huddled against the side. You will often observe that children who can walk will leave their beds at night and seek their mother or father. As an attentive reader, you will now understand how it is that cot deaths can happen since babies are not yet able to move away from disturbance centres. Cats and ants are an exception among the animals since they are particularly attracted to such places which adversely affect us so that their preferred spots should be regarded with suspicion from the start. You can check your skill with the pendulum at such places. Damp spots in the ceiling or cracks in the masonry also suggest that Earth radiation makes its presence felt as it does in Nature through deviations from the normal state, i.e., sparse growth, slanting growth or lumps on the trunks of trees, etc. Thus at the congress in Brazil to which reference has already been made, Siegfried Otto of Kehl, a retired senior forestry engineer from Germany, showed slides to demonstrate what had become of the seeds and plants which he deliberately planted at disturbance centres which had first been precisely identified: they all displayed mutations or deformations. This should be enough to show the importance of the question of location and to make it clear that even inconveniences should be accepted if radiation can then be avoided since this is far better than any protection from screens. Screens: If the room conditions make avoidance impossible, then you have no alternative but to use screens. There are thousands of such screens at all prices but even the expensive ones are often not reliable in the long term which is why I also advise the persons who would like to have the help of a dowser to get him to show them first of all the places with disturbance.

' . \_ 5.-

I will now list some screens which on c tum"  
practically no cost. The Brazilian iadiaggogatgsggsgggngt  
Maroondes found the following way of neutralizing Earth radi-  
ation. One soup-spoonful of salt is placed in three cups or  
Vessels which are stacked to form a tower. They should eahh be  
of such a shape that the salt in the two lower vessels doe not  
come into contact with the air. Now place this tower as close as  
possible to the disturbance centre - if you cannot put it Jnaer  
the bed then next to it. This provides protection for 48 hours  
The salt in all three cups must then be renewed since it is  
saturated with radiation with negative consequences.

Another form of neutralization is to place a la or of 5

a a

each of fresh newspaper between the mattress ahg the fragego:  
the bed. HOWever, the paper must be renewed after 5 days and is  
to be removed from the house since it is then saturated with the  
radiation absorbed and is dangerous.

A third form of protectIOOn is offered b '

y the MM-rin invented b

the Dutch Count Limburg Stirum: a ring with a diamgter of 40 t:  
50 cm (15-20") is formcd from a twin-core, :win-colour cable. It  
is important that the upper core or the cable is always on top  
wise and well insulated

ing is placad over the

d or on or under

'30 that the connection must be made crooo

as if it Were an electrical cable. This r  
disturbance centre under the mattress in the be  
the chair.

Finally, I will also mention another method although many people  
will probably find it difficult to acceptt with a thick crayon,  
a croas is drawn on a sheet of paper of notepaper size. The  
cross must have equally long arms of 8 cm (3") in length. The  
pooitve effect is anociatod with the energy of the forms. This  
sheet of paper is fixed underneath the armchair or is placed in  
the bed under the mattress above the disturbance centre.

Rxpltnntion oz mnrrth radiation: What is the explanation of this  
phenomenon known as "Earth radiation"? Primarily, it is a  
question'of emanationa formed under subterranean watercourses.  
When such watercourses cross at different levels, the area above  
is particularly dnhgerouo. Mention muut also be made of the  
disturbance centres found above mineral deposits and geological  
faults. Thase influencem are accentuated when they cross the  
Hartmann grid. These are electromagnetic lines which run from  
north to south at every 2.0 metres and from east to west at every  
2.5 metres. There is also another system, the Curry grid, and by  
themselves these grids do not normally have such a devastating  
influence on people but they certainly do in combination with  
Earth radiation.

That Earth radiation is something quite special is also demon-  
strated by the fact that it is found just us much on the lowest  
floor of a skyscraper as on the highest.

l&l interest is electroamog and in general the  
most diverge forms of electricity introduced by modern Man 50  
that national and international radiation protection organiz-  
ations are increasingly turning their attention to it and are  
endeavouring to restrict the danger by specifying firm standards.  
Where such artificial disturbances coincide through electromagw  
netic fields with the natural geological disturbances (Earth  
radiation), the danger for ue humans is very much greater: Mahy  
A subject of spec

or you will have heard of the fivefold number of act deaths in Kehl. It was precisely at this time that the beat radiation expert of Brazil, Dr. Marccndee, happened to be in Europe which is why I accompanied him to Kehl to find out why it was precisely at Kehl that so many cot deaths occurred. The explanation: highw tension cables in the vicinity of Earth radiation, leading to the potentiation of the danger. Persons who have high-tensich lihee in their vicinity should therefore take special care that they are not exposed to Earth radiation. Many cautious people install isolation switches in bedroomsi devices which prevent any flow of current at all during the night and prevent electromagnetic fields from having a harmful influence on the human organism during the night. But then you must also do without the electric radio alarm next to the bed and instead use a mechanical alarm clock without a battery.

It is particularly important that during the night in the resting state - sleep - you are not exposed to natural Earth radiation, to be equated with an enhanced terrestrial magnetic field, and of course especially not when there is also an increased effect through artificial electromagnetic fields since these cause a change in spin in the molecules in the body. The effect of this is that the normal polarization in the body, which is to be considered as healthy, is lost, i.e., depolarization takes place. Use is made of this phenomenon for medical purposes, e.g.. in tumour spin tomography, where powerful magnetic fields temperar- ily change the directich of spin of the molecules in the body. Dr. med. Aechoff speaks of magnetic blood which demonstrates the strees-free state of the blood in contrast to electrical blood. Finally, I would like you to consider that the Chinese introduced a regulation 4000 years ago which required that an investigation or the ground had to be carried out before a house was con- .mletrueted so that the yggms could he planned in such a manner that the inhabitants were nut exposed to rediationhmm etreeeee, which in those days were still known as "evil spirits". And this regulation still exists today: I am happy to note that more and more people are also carrying out investiga- tions of the ground before building and this ie alao being done by progressive governments, SUCH as that of Austria which, in clear recognition 0: the danger, financed the investigations gerrigd outlbgonr. Bergmann fof 35 years with a group of la xper s on 0 persons and wh ch allowed 0 bt a toxicity of a disturbed location. no d u bout the May I ash you to pass on this c;rcular if you are not interested in it Since I can only distribute it to a limited number of persons. You can, or course, also copy it so that others may likewise profit from it.

Yours sincerely,

PABLO PRGLICH
