RECOMMENDATION ON THE SPECIFIC ISSUE OF AIDS

Arising from the priorities commission, further recommendations are included with regard to AIDS:

BACKGROUND INFORMATION

1.

2.

That the apartheid system has created fertile ground for the spread of AIDS - Of importance are the migrant labour system, inadequate health facilities and health information and poverty with all its physical, psychological and social implications.

That AIDS is making an impact all over the world, but is having devastating consequences in parts of Africa and on its capacity to develop.

That the state, does not have the will, or more importantly the credibility to promote AIDS prevention programmes.

RECOMMENDATIONS

1.

That projects and organisations actively participate with the outreach AIDS prevention programme developed by the health secretariat of the African National Congress and all the progressive health and social services organisations of South Africa in Maputo in April 1990.

That all sectors recognise their responsibility to take up programmes of education about AIDS and its prevention.

That AIDS prevention programmes be included as part of development plans and programmes at the local, regional and national level.

To urgently initiate research on the economic, social and political impact of AIDS.
