5.

7.

The Ministry of Housing is committed to reaching the goals of the RDP provided the following fundamental environmental factors are in place, i.e. the support of government $200\231s$

social partners; respect for due legal processes, and the vigorous enforcement of legal contract; the programmatic enhancement ofcapacity at provincial and local levels; long . term budgetary certainty at national level; the timely provision of.land and services (local

government).

Thus i^201n the macro-economic $i^201a^200^230$ amework has not yet had an impact on land reform.

Existing budgetary constraints have so far not substantially limited land reform Their major concern is the insufi¬\201cient human resources to ei¬\201ectively carry out the programme.

There has also been no discernible impact by the Macro-economic Framework on the redistribution of agricultural land. It is however evident that increased. budgetary and human resources will need to be allocated when the process of agricultural land redistribution comes into i^2 01Jll swing. This will necessitate rea^200^24pn' 0ritisation of programmes

and budgetary expenditure. Areas that need to be $una^200^24blocked$ in order to facilitat e geater

agricultural land redistribution include the restructuring of the statutory i¬\201nancial institutions such as the Land Bank, equalisation oflending rates by the statutory i¬\201nancial

institutions at both the national and provincial levels to encourage $efi^-\201cient$ and accountable management of agricultural $i^-\201cient$ resources; and the resolution of the current R1.3 billion debt to the state.

The Macro Economic framework has provided a broader context for the substantial programme of investment envisaged for municipal infrastructure. It has increased the .prioï¬\201ty status ofthe Municipal Infrastructure Programme, emphasised the importance of

job creation and training. in the programme, and created a greater emphasis on . partnerships between public and private sectors in the delivery of municipal in $\$ 101astru cture.

The Department ofProvincial Affairs and Constitutional Development has played a key role in implementing the strategy for Growth, Employment and Redistribution by focusing on investment in municipal infrastructure, promoting partnerships between the public and private sector at local government level, stabilising local government in 201 nances and improving the municipal debt problem.

In Summary, evety Ministry is committed to the Macro-economic Ftamework. They are - concerned about budget cuts in the social sector which may fall to below the existing \mbox{i} $\mbox{-}$ $\mbox{-}$ 201tnding

levels because this will compromise the implementation of R'DP policies and targets to whi ch this

government is committed. Perhaps better understanding and coordination bWeen the social and d

economic sectors will allay their fears and lay the foundation for political leadership in the $\!\!\!\!$

implementation of the RDP within the i-201mnework of a coherent growth and development strategy.

T0 date, less than 10% of this state-owned agricultural land has been transferred to the previously disadvantaged farmers through leasehold in the vaiious provinces. It must be noted that the i-201gure could be more when one takes into consideration restitution cas es

as well as redistribution ofland where either communities by land as groups or individual s-

The $diin\201$ culty where land is bought in groups the extend of agricultwal activity cannot be

guaranteed. At the current rate of redistributing agricultural land, it is doubtful wheth er

the original target of 30 million he will be realised by the year 1999. The formula for redistribution of agricultural land needs to be changed by, among others: clearly» identifying the different beneï¬\201ciaries of agricultural land redistribution; removing all

artiï \neg \201cial credit, $\ddot{\neg}$ \201nancial, marketing, and procurement distortions as a prerequisite for the

success of an agricultural land redistn' bution programme; investigating a range of options to fast $200\224$ track the delivery of agricultural land; extending long-term rental or le ase

agreements (at least 30 years) on all state owned agricultural land to targeted farmers a nd ;

addressing the total farming investment requirements of a targeted bene i^{-201} ciary in ord er to

realistically determine the state grant and its elements that is absolutely necessary for a

viable family farming unit.

,

 $\text{Deâ}\200\224 \text{racialisation}$ of the sector both in production and public sector representation

There has been a growing involvement by commercial black farmers in the various agricultural industries suCh as horticulture, sugar cane, livestock and grain. The contribution of these farmers in terms of their market share , whether in the specii \neg \201

industries or in the entire production is still negligible. There is potential to increas e and

improve the market share ofthese farmers by focusing both on the challenges faced by the already existing black commercial farmers and the new entrants who will beneï¬\201t from the

land reform programme. Specii¬\201c programmes which are targeted to the various types of the i¬\201rm sector need to be designed and implemented. These could include programmes that target young people and women into the sector. It may als'o mean targeting specii¬ $\201c$

industries Where in black farmers may be encouraged to invest.

Support Services

Specii¬\201c complementary . programmes such as reâ\200\224training extension in the Northern

Province in collaboration With GTZ (German Development Agency) has been implemented. The overall objective of the new agricultural <code>i¬</code>201nancing programme is to broaden its access to all farmers, especially the new emerging farmers; Since 1993/94 to 1996/97 <code>i¬</code>201nancial years, a total of R171 million was budgeted for various assistance schemes for emerging farmers. Over the period, R34 million was actually extended as credit to a total of 9000 new farmers. The combination of research, technology – development and transfer has the capacity to increase the ability of smallholder farmers to gain higher productivity and realise reasonable return on their investment. This however, will depend on the capacity of the extension to keep abreast of developments in these <code>i¬</code>201elds

- Conditions for success .

In committing the Ministry and the Department to reaching this goal, however, the following in 201mdamental environmental factors need to be in place: the support of governmentâ\200\231s social partners; respect for due legal processes, and the vigorous enforcement of legal contract; the programunatic enhancement of capacity at provincial and local levels; long term budgetaxy certainty at national level; the timely provision o

land and services (local govt); support for a saving-driven delivery culture by housing consumers. In short - the Minisz and the Department are conin 201dent that as a governmen

and as a movement, we can meet the housing commitments made for the election, but cannot do so without the clear and ongoing support indicated above.

In keeping with the "¬\201gure of 1 million houses, however, political integrity will req

to be clear that are talking about this government having subsidised a million houses tha

are either completed or in construction in the period to 1999. This is in keeping with th

Declaration of Commitment made by the National and Provincial governments, and endorsed by all relevant national interests, at Botshabelo in 1994. Our current projectio

indicate that, during 1997, an additional 192,765 subsidised housing units will enter (an d.

in many cases, complete) production. Details of the expected housing delivery programme are set out in the table below.

11

However, these seem to have been overcome, and' a number of business plans have been approved recently, and the renovation is expected to accelerate in 1997. The school building programme is also continuing and approximately 200 schools have been built in all provinces so far. As stated earlier the target for 1999 is 5,000 new classrooms. Changes in targets

It is our view that in education the targets we set ourselves for 1999 were realistic, an d

if a few minor obstacles are removed, they could still be reached. We thereforedo not believe that these should be changed. However, we are concerned. that the impact of the Maoro-Economic Framework on these and other targets may be very big.

MINISTRY OF WATER AFFARS AND FORESTRY

4.1/2

GOALS AND OBJECTIVES

Community Water Supply and Sanitation

The Department of Water Affairs and Forestry $\hat{a} \geq 00 \leq 31$ s Community Water Supply and Sanitati on

Programme was initiated in 1994 to achieve a Constitutional objective of ensuring that al 1

South Africans have access to $sufi¬\201cient$ water and a healthy environment.

Forest

Trees gift): a vital role in most South African households not only as an enhancement of the environment, but also and especially in rural and informal settlements, as an energy source for more that one third of South Aï¬201'ioaâ200231s pOpulation. These peOple st ill depend

directly on trees as a source of timber for housing, kraals and local craft industries and of

fruits and medicinal products. In order to address this need and to increase the sustaina ble $\bar{}$

and accessible supply ofwood to those peOple who rely on it for survival, the Department facilitates community forestry development throughout the country by initiating and supporting community-driven development and management of the resource.

,4.3

RDP TARGETS

a.

_

Community water supply and sanitation

Over 700,000 previously unserved people have already been supplied with water and R3 00 million spent. Over 10,000 person-months of paid work has been generated and more than 35,000 persona $200\224$ days oftraining given. This is in addition to the approximately

6 million people served by existing schemes operated by the Department. A network of provincial plaming forums _'to guide the community water supply and sanitation progamme was established and a national assessment of water and sanitation needs was completed. R1 585 million was allocated by the end of 1996 and 706 projects started which will ensure that a total of 6.4 million people gained access to water supplies and 100,000 to adequate sanitation. The 4th annual programme projects to serve a further 2.1

million people at R700 million will	a cost of R650 mill be spent in 1997 an	ion has recently nd R1 000 million	been announced. in 1998.	It is expected that

Free health care forchildren under 6 years of age.

At the Opening of Parliament on 24 May 1994, the President proneunced that health care for children under 6 years of age will be free in all public health care facilities. This presidential decree was implemented in June 1994.

. CL

To improve access to womenâ\200\231s health.

This was implemented simultaneously with the free-health care for children. As $i \sim 201\hat{a} \sim 100 \sim 1000$

June 1994, every woman in South Africa was entitled to free health care during pregnancy, birth and after child birth.

Immunisation coverage of children to reach 90% by 1997

A study which was done in 1994 revealed that only 63.3% of children at 1 year were appropriately immunised in SA. This is mainly due to lack ofprimaly health care facilitie

especially in rural areas as well as lack of adequate logistical support. Because we have launched a major clinic upgrading and building programme, it will be possible to reach an immunisation rate ofbetween 80% - 90% by 1999. The World Health Organisation target for the year 2000 is 80%.

Eradication of polio and measles by 1996.

South Aï¬201'ica has been declared a polioâ200224free country. Measles has not been' e radicated yet.

In 1994 our measles coveiage for children under 1 year was 84.5%. It is doubtful whether we will reach our RDP target by 1996 because our pn'mary health care network is still expanding. We are establishing an epidemiological surveillance system to keep this problem under control.

Right to choose whether or not to have early termination of pregnancy. One of our most recent victories was the passing of the Termination ofPregnancy Bill which will be implemented during 1997. This Act will save over 400 women who die annually and thousands suï¬\202'er serious infections due to back street abortions.

Programme to eradicate Tuberculosis.

Tuberculosis still remains a major problem in South Africa. There are on average approximately 222 infected persons per 100,000. In' 1995 there were 90,000 new cases of TB and 3,000 deaths reported. A team led by the World Health Organisation conducted a review of our TB control programme. They proposed a strategy that has been proven worldwide to reduce tuberculosis. The Department has adopted this strategy and we are monitoring progress. The target is to achieve a cure rate of 80% in smear positive cases.

â\200\230

Sexual health and HIV/AIDS.

HIV/AIDS still remains a serious threat to humanity and the economy of South Africa. Unfortunately, conventional methods of promoting disease prevention are not $ei-201\hat{a}/200/230$

in preventing the spread of HIV/AIDS. HIV prevalence continues to rise sharply, especially amongst the youth. Each day, there are more than 500 new HIV cases. The most affected provinâ\200\230ces are KwaZqu-Natal, Mpumalanga and Gauteng. HIV/AIDS is no

. just a health problem. We need a concerted and coordinated $e\ddot{\imath}\201\and200\2300xt$ on the part of

government, nonâ\200\224govemmental organisations, the private sector and civil society.

3

3

Improved access to emergency services through provision of more 24hr services. This target has not been achieved in i-201ill. Since July 1996, provinces have commissioned

more clinics that will provide a 24hr service. One ofthe major problems in realising this target is the shortage ofhuman resources, especially doctors in peripheral and rural area s.

In some areas health workers are refusing to work beyond their normal working hours, even with overtime pay, especially local government employees. The provinces are pursuing discussions with organised labour and local government regarding this. Violence is also a threat to health personnel working after hours especially in remote areas. Communities need to be mobilised to protect these services. The ambulance service still needs a major restructuring

National Health Information System.

It is critical to have adequate and reliable information for planning. We have establishe

a National Health Information Committee which has members $in\202'$ om the national health department, provincial health departments, private sector and research institutions. A national health information strategy has already been developed. It has been decided to organise this infomation at provincial level $in\201$ rst and then consolidate it nationally . All the

province have identii¬ $\201$ ed i¬ $\201$ nancial resources to purchase computer hardware. The majority

of provinces have already issued tenders for the software. We are coniş \201dent that this target

will be achieved by 1999.

Human resource development

Human resource development is one of our key strategies for transforming the health sector. During the past two years we have concentrated on training primary health care nurses who can work as independent practitioners With minimum supervision especially in peripheral, rural and motenreas. We have also foeuoood on management training. The retraining $200\230$ and $-00\230$ entation of health workers has unfortunately been slow.

•

Free health care in 5 years.

Since 1 July 1996, all South Africans have enjoyed free health care services at the prima ry

level. This has been achieved to a large extent through the _re-pn'oritising of the curre nt

health budget. Initially the implementation of this programme caused problems as all facilities were heavily utilised by the public. The <code>i¬\2011l</code> bene<code>i¬\201t</code> of this programme will never

be realised as its value cannot be quantii \neg \201ed in rands and cents but by the diseases which

have been prevented and deaths which have been averted.

.

Equitable allocation of resources.

Until the 1996/7 <code>i¬</code>\201nancial year, the National Department has been responsible for distributing the budget amongst all the provinces. A formula base on p0pulation and other relevant health indicators was used to ensure equity in distn'buting resources. As <code>i¬</code>\201 a\200\230om this

year the Financial and Fiscal Commission (PFC) has made new recommendations on how resources will be distributed ainongst the various provincial departments, i.e. via block grants to provinces. The implications for equity using this method have not been studied.

13-01-97 18:28

FROM :

ΙF

PAGE

8

12

If these targets are reached, a funher 1 700 000 people will be served in 1997 and two million in 1998. Where capacity exists the operation of existing water sapply schemes at local level, particularly in the Northern province and Mpumalanga, will be handed over to local government or water boards. Actions are underway to establish new water boards to ensure effective operation of eadsting schemes and to promote regional water supply in the following . areas; Mpumalanga Lowveld, Kwazulu-Natal Tukela Region, Eastern cape and Western Cape Peninsula.

Water Services (water supply and sanitation) legislation will be introduced in 1997 to establish a framework whereby centml government can establish norms and standards for - the provision of such services and provide the support necessay to local government to achieve the equitable and sustainable provision ofservices. This will also provide the basis

for the promotion ofwater conservation at local government level. The programmes is promoted within the policy framework established by the 1994 White Paper on Water Supply and Sanitation. A White Paper on Sanitation Policy was produced on an inter-Ministerial basis in 1996 and a National Sanitation Coordination Omce established to promote the joint sanitation strategy. During 1996, guidelines on the involvement of the private sector in service provision were issued and are already being applied.

Flood management

The Department successfully switched its attention in 1996 from managing the consequences of drought to dealing with the other extreme of climate - $i_1 \ge 0.000$ The tragic loss of life in the Xmas of 1995 $i_1 \ge 0.000$ in Pietennaxitzburg obscured the overa

success in managing a session of very high rainfall in 1995/6. Through the management of the national dam infrastructure and the issuing. of early warnings to $ai_7\201a\200\230$ ected

communities, i = 202000 damages were kept to a minimum. The management of the i = 202000 in the Vaal river was particularly successi = 20111.

National water conservation campaign

The national water conservation campaign is worthy of special mention. The various educational and promotional activities of the campaign continued to raise consciousness about te value of water resources and the $\hat{a}200\234$ Working for Water Programme $\hat{a}200\235$ h as proceeded successi-20111ly.

â\200\230

Community forestrj'

A total of 635 major community forestry projects and 1445 minor projects were initiated throughout the country. The imPact of the Community Forestry Programme is evident in the total of 1,9 million trees that have been planted. It is anticipated that the community $\hat{a} \geq 00 \leq 30$

forestry programme will directly promote the planting, of approximately 1 million trees over the next 3 years. Since the introduction of the Community Forestry Programme in 1996, extension staï¬\201â\200\230ofthe Forestry ChiefDirectomte have been involved'in in itiating and

overseeing community forestry projects ofvarious kinds, such as woodlots (community and individual), community nurseries, home nurseries, windbreaks, school greening and many more. Excess stat?from the commercial forestry operations in the former homelands are being re-deployed in community forestry activities.

Ir

PAGE

7

13

Community forestry is to a large degree still a new concept and although much progress has been made, further developments may be impeded by the lack of capacity and funds within the Department to provide the necessary support and extension services on the one hand and lack ofunderstanding and competences on the part of the communities. Strong support by the international community (especially by the Finnish, Danish and Irish governments) has however been very encouraging.

. MINISTRY OF HOUSING

5.1 + 2

GOALS AND OBJECTIVES

The ANC, in its election campaign, promised the electorate the delivery of 1 million . houses in the $i_7\201$ ve years to 1999.

Discussion

In implementing this goal a number of factors had to be addressed, which has taken a considerable period of time. Besides the policy and institutional legacies of the aparthei d

era, the major policy obstacles mitigating against success in the housing sector include these:

~ ~

~

the overwhelming poverty of the majority of the pepulation;

the i¬\201scal constraints on government;

the legacy of inappropriate institutional, legal, i-201 nancial policies and i-201 amew-orks;

3. $in\201$ mdamental breakdown of the housing sector in the period before the elections; long lead times;

time required to implement a new policy, Within the framework of a new Constitution;

and ether factors, many ofwhich have been experienced by other ministries.

Because of the long lead times, and. the policy uncertainty that existed in the i-201rst' period

ofgovernment, a broad dual approach was adopted. On the one hand, attention was paid to the policy formulation, . design and implementation process (a national framework) while, simultaneously, housing demand was stoked through the continuous feeding of subsidies into the system. The two approaches started to merge in 1996.

. 5.3

a.

RDP. TARGETS

1 Million houses in 5 years (1999).

The ANC can and should remain committed to the target of 1 million houses that will be completed or in construction in the period to 1999. In January 1997, we can report that a total of 115,000 houses have been completed or commenced for families qualifying for

the subsidy. Over 80% of the subsidies are being received by households with an income of less than R801 per month – the poorest of the poor. Because of the poverty factor, only 16% of houses subsidised thus far have been able to access private sector i^{-201} although the trend is improving.

PAGE 19

THE IMPACT OF THE MACRO-ECONOM16 FRANEWORK

Most developing countries have been increasingly obliged to make adjustments in their eco nomies

in response to macroeconomic problems of imbalance between aggregate demand and supply, ini¬\202ation, unemployment, and shortage of foreign exchange. The sources of these problems are-

both external and domestic. This government is doing everything in its power to tighten i ts belt

and rea^200^24 prioritise budget expenditure. Nonetheless our economy continues to be ero ded, the rand

is depreciating unemployment has reached unacceptable levels and more resources are neede d

to provide basic needs such as health, education, housing, water and sanitation t6 the $\ensuremath{\text{ma}}$ jority of

South Africans.

′

Though we support Growth, employment and Redistribution (GEAR) strategy, it must go hand in hand with improvement in revenue collection so that the cut backs on resources available for

provision of social needs are not drastic. We cannot deny the fact that in the short term , the

imminent budget cuts will aï \neg \201ect the delivery ofbasic services adversely. We will experience some

us $\[\]$ us $\[\]$ us of providing a better life for all South A $\[\]$ vicans. We are therefore committed to

operate within the budget constraints and to re-prioritise our budget to ensure that we continue

to provide essential health services which will have maximum impact on the lives of our people.

Ministries regarding the impact of our policies on the macro $\hat{a}\200\224$ economic framework T hese are:

1.

2.

3.

Health will do' everything to cushion the budget cuts but is concerned that the current funding levels should not be eroded as this will have a major impact on the delivery of , basic health Services. Another challenge faced by the Health Ministry is the funding ofth ${\sf e}$

rehabilitation programme for the health facilities. A recent audit of all our hOSpitals revealed that 27% of our capital stock is in a bad state Of disrepair and would require between R6 - R8bn to replace over a period of 10 years. We are investigating; > innovative means of Tallo 10 years are investigating; > innovative means of Tallo 10 years.

The social sector, particularly education, health and welfare are all concerned that' with the

block grants there is no guarantee that the agreed priorities will be funded. It is critical,

therefore, for the ANC to make sure that those priorities like education, primary health care and social grants, especially for the rural poor families for whom this may be the only

safety net, are guaranteed.

.

The Minisz of Education is perturbed by the budget cuts which are implied in the Mach economic $i\neg\201$ 'amework. If these cuts are real, the implementation of the policy of free and

compulsory general education will be seriously threatened including bridging the backlog.

National Drug Policy and Essential Drug Policy.

We have developed a national drug policy which will ensure that high quality drugs are. 'accessible and aï¬201â200230ordable to all South Africans. Since April 1996, an essential Drug List -

(EDL) was introduced at primary health care level. We are coni¬ $\201$ dent that an EDL Will be

available at all levels of Care by 1998. During this year we will pass regulations on the licensing ofdispensing doctors. To make drugs affordable a professional fee will be paid for dispensing instead of a proï¬\201t mark up.

We will consider parallel importing of essential drugs if we cannot purchase drugs at affordable pn'ces locally. We will deal with the theft of drugs $ei_{200}230ectively$ -

.

Intersectoral Collaboration

Health problems have many and complex causes whose solution demands an intersectoral approach Up to now there has been very little collaboration amongst the various sectors to maximise the health bene $in\201$ ts for the nation. Although it is important to improve a ccess

to health services, it should also be recognised that this will have limited impact on reducing the burden of disease and the gross discrepancies in health status. An intersectoral approach is necessary if the extensive role of other interventions in health

promotion is to be fully reCognised and promoted. The present initiative of cooperation and collaboration amongst the ministries representing the social and economic sectors must be encouraged and sustained.

Social Health Insurance

Private health care i-201nancing, particularly through medical schemes, faces a number of

problems, such as the cost escalation, undermining ofcross subsidisation and risk pooling

and poor supervision and management. People who are employed and covered by medical schemes are increasingly being forced to opt out of the private sector and utilise public hospitals, which they do without paying fees. This is mainly due to increasing costs of medical schemes. The Department of Health has established a technical task team to investigate the development of a health insurance coverage. This insurance will allow public hosPitals to bill employed workers and their families for hospital treatment, thus bringing more revenue into the public health system.

Local Government

We welcome the democratisation of local government. This will enhance the delivery of health care services at the local level. In the medium to long term, primary health care services at local level should be delivered by local government. However, in many instances, provinces will continue to deliver these services in many areas whilst also building the necessary capacity in local government to take over these functions. We have adapted a district based model for the delivery ofhealth care services at local level to ensure that the deliver of these services is decentralised to the lowest appmpriate level and the rational utilisation of available resources, taking into account economies of scale

' and capacity within local government- We have already commenced discussions With local government with a view to integrating the delivery of health services at local level and to

systematically build eapacity in local government to implement the district health system

Report of the Social Sector on the Implementation of the .

Reconstruction and Development Programme

INTRODUCTION

The achievements of the ANC during the past two and a half years have been remarkable, nomithstanding the challenge of transforing a facist regime into a people $a \ge 0$ government founded

upon sound democratic and constitutional principles. This review comes at a critical time during

our term of oti¬ $\201$ ce. We are convinced that this government is on course. We will renew our

strength and commitment to implement the goals of the Reconstruction and DevelOpment Programme. The budget constraints should not distract us from our main objective objective to

improve the lives of our peOpIe and to provide their basic needs.

This report re $\[\neg \] 202 = ts$ on the social sector and hence attempts to re $\[\neg \] \] 202 = t$ in the Sou th A $\[\neg \] \] 201 - ican$ reality

how we are ensuring thaat a good education is accessible to all, health services are available to

all, social security and social welfare and meeting the basic needs through food security , water,

housing, sport and recreation. The above mentioned are not only conditions but objectives of

social development and integration.

1.

MINISTRY OF HEALTH

v-

- 1.1
- 1.2
- 1.3
- a. -

OBJECTIVE

The primary objective of the ANC is to create a single, comprehensive and integrated National Health System which includes public and private sector resources and is organised at national, provincial and loa^200^231cal level.

GOALS

Our goals were t9 unify the i-201agmented services that we inherited, to entrench primai y health care, to promote equity, access and appropriate utilisation of all health resource s, to invest in human resource development and to ensure community participation in the

planning, provision, control and monitoring ofhealth care services.

RDP TARGETS

To form a single National Department of Health. Within 6 months in government, we amalgamated all the fragmented health departments and fanned one national health department and nine provincial health departments. Now that local government has been democratised, we are engaged in discussions {vith organised local government to establish the district health system as a model for health care delivery at the local level.

Rehabilitation of Health Facilities

We have recently completed the $i\neg\201rst$ ever audit of all our hospitals. This audit revealed

that 27% of hospitals are in a bad state of disrepair and we need between $R\tilde{A}\otimes Dn$ - RSbn over a pen'od of 8 years to replace these facilities. Our biggest challenge is to develop innovative $\ddot{a} \sim 201$ nancing suategies to fund the replacement and rehabilitation of these hospitals

which are necessary for the delivery of high quality health care.

National Health Bill

A National Health Bill will be tabled in Parliament during this year. This Bill will replace

the current Health Act and establish a legal framework for implementing all the policies developed by the Department.

MINISTRY FOR WELFARE AND POPULATION DEVELOPMENT

2.1

2.2.

â\200\230

OBJECTIVES

A new model for Social Welfare has been established through the white paper process that is consistent with the approach as outlined in the RDP base document. A high level ofpublic participation was achieved and there is a general sense of enthusiasm about the new direction among stakeholder organisations. The vision for welfare is to have a welfare .98th whichfacilitates the development ofhuman capacity and self-Lreliance within a caring and enabling sacio-economic environment.

The. mission statement

commits us to save and build a selï $\neg\$ 201reliant nation in partnership with all stake holder s

through an integrated social welfare system which maximizes its existing potential, and which is equitable, sustainable, accessible, penple centred and developmental. This vision and mission will be realised progressively through the implementation of $\$ \201ve

year strategic plans.

GOALS

The department facilitated a process during 1996 to develop a Social Welfare Aetion Plan (SWAP) for implementation during the <code>i¬\201rst i¬\201ve</code> years. The SWAP will be re<code>i¬\201n</code> ed once

the white paper is $\[\]$ 201nalised by Parliament. The Social Welfare Action Plan, contains the

following geals for the <code>i¬\201rst i¬\201ve years:</code>

.

- 2-2.1 To develop an inclusive, unifying and integrated institutional framework for the delivery of social welfare services in close partnership between the government and all stakeholders with due recognition for diverse needs. .
- 2.2-2 To develop the human resource capacity in the welfare i_{γ} 201eld in close partnership between the government and all key role players.

.

7.. 8.- To develop comprehensive legislation at all levels of guvenmem in close cooperation with stakeholders.

_

2.2.4 To develop a i_2 201nancial and performance management system, which will link policy planning and resource allomtion, monitor and report on $a^200\230$ progress of welfare programmes in respect of the public and private welfare sector.

The i¬\202aqship programme

A i^2 02agship programme targeting unemployed women With children under i^2 01ve was launched during 1996.

The intention of the programme is inter alia to provide

impoverished women with an opportunity to develop skills and to become economically independent and not to be reliant on state grants. Aï¬\201er'the launch of all the planne $\tt d$

programmes countrywide, the total number of women who will beneï¬\201t will be 1,560. The number of children beneï¬\201tting will vary according to family size. Taking the average number of children as 4 per family, it is estimated that the number of children who will be

reached by this programme, is 6,240. If the programme proves successful in the different areas, it will be replicated and will reach more people. The programme is to run for 18 months before replication is considered.

services will be expanded particularly in poor â\200\230and

The implementation of developmental social welfare

We have started a process to move away from expensive institution based services to community-based services, especially in the i-201-eld of caring for the aged. It is hope d that

through this process,

black

communities. By 1997, community support programmes will be in place in all provinces, targeting marginalised groups for integration into society, for released prisoners, persons

with IHV/AIDS and children in $coni¬\202ict$ with the law. Similarly, inter-sectoral community

development programmes Will be developed in the provinces geared towards targeting women and youth for economic empowerment and skills development. In this regard the Poverty and Inequality Report-will be used as an important tool to reducing the gap between the governmental programme and poverty needs. On the basis ofthis, longer term measurable targets will be set.

Creating an enabling environment, consolidating; relationships with NGOâ\200\231s and develoPing new partnerships $a\200\230$

A range of strategic interventions'to improve the functioning of NGOâ\200\231s Will be put in

place. The Department is in the process of $\[\] \]$ of $\[\] \]$ new legislation for the not-for-pro $\[\] \]$

sector. Government mechanisms to replace interim mechanisms are being developed and social service personnel retrained to enable the NGO sector to participate in developmental social welfare delivery. A new policy framework for government funding ofNGOâ\200\231s with clear i¬\201mding criteria and a tender system Will be i¬\201nalised by May 1997.

From the total annual welfare budget of R12,3 billion, R1,2 billion is for transfers to $NGOa^200^231s$ and national councils for welfare services in various communities.

National Crime Prevention Strategy

Our goal is to contribute meaning \bar{z} 201 illy and \bar{z} 201 and \bar{z} 201

the establishment ofintegrated support services for victim empowezment; the development .of existing services on governmental and non-governmental level; the dissemination of information on the abuse of women and children (especially sexual abuse),

procedures; the promotion of voluntarism in victim support work; and the twining of criminal justice and social service personnel for victim empowerment by June 1997

MJN'ISTRY OF AGRICULTURE

7.1+2

GOALS AND OBJECTIVES

The overall aim of the RDP with regard to agriculture is to ensure food security, become competitive and a prosperous economic sector in the country. .aimed at the redism'bution of 30% agriculture all land. This was seen as a resource. It sees agriculture as an important element for rural development with the previously disadvantaged farmers as its principal beneï¬\201ciaries. Its speciï¬\201c objectives Within agriculture are to:

~ ~

de-racialise the sector,

broaden access of the previously disadvantaged farmers to mainstream agriculture; transform the public sector institutions e.g., civil senrice and parastatal agencies; provide agi¬\201ctilmial support services e.g. research, i¬\201nance, markets, extension and

training;

build the human resource capacity of especially the previously disadvantaged communities; and

redistn'bute 30% of agn'cultural land by 1999.

-

Vision

The vision of the White Paper on Agriculture is a highly efi- $\201$ cient and economically via ble

market-directed farming sector, characterised by a wide range of farm sizes, which will be regarded as the central economic and social pivot of rural South Africa and which will in $\ddot{\}$ 202uence the rest of the economy and society. Its critical policy goals are production.

marketing, sustainable utilisation of natural agricultural resources, agricultural $i\neg \201$ nancing,

institutional infrastructure, information and agricultural technology, research, extensio $\ensuremath{\mathtt{n}}$

and training. And its specii¬ $\201c$ objectives are:

developing a new order of economically viable, market-directed commercial farmers, With family farms as the basis;

the broadening of access to agriculture via land reform should be enhanced by adequate agriwltural policy instruments, and supported by appropriate means of the provision of appropriate services,

i-201nancial systems should focus on the resource-poor and beginner farmers, enabling them to purchase land agricultural inputs;

trade in and the marketing of agn'cultural products should re $\[\neg \] 202ec :$ market tendencies;

agricultural production should be based on the sustainable use of the natural agricultural and water resources; .and

developing agriculture $(200)^2 1$ s important role in the regional development of Southern Africa and other countries.

.

.~
7.3

RDP TARGETS

\$\200\231

Agricultural land redistribution
The RDP Goal is to redistribute 30% or 30 million ha of the total 99 million ha agricultural land within the i¬\201rst 5 years of our democratic government. This implies the redistribution of about 6 million ha every year.Available state-owned agriculture\(\frac{1}{200\234} \) land18
about 1 million
"

PAGE 1%

16

So farâ $200\230$ four communities have returned to their land: Mogopa, Riemvasmaak, Rooigrond

and Elandskloof. This involved approximately 2 500 people. Altogether some 11 000 claims have been received. This number can be misleading because in many instances one claim is represented by a large mnnber ofindividual claims, particularly in urban areas (eq

District Six, Cato Manor, Fairview). It is difi¬\201cult to media i¬\201mire progress bec ause

restitution is dependent on i-201nalisation of the claim by the Land Claims Court. At least

another 25 communities should return to their land during 1997; This represents at least a sixfold increase on past achievements. There are two major limiting factors on progress .

the limited capacity of the Commission on Restitution of Land Rights, which has four Commissioners and 58 permanent $stain\201a\200\230$, and the fact that the interim Constitution requires

that every case must be processed by the Commission before the Land Claims Court can deal with it. This creates a bottleneck. Two steps have been taken to deal with this. The Cabinet has approved the Restitution of Land Rights Amendment Bill, which will make it possible for claimants to have direct access to the Court, thus removing the bottlenec k-

And the capacity of the Commission is being increased by 40% by the appointment of an additional Commissioner and through the use of donor i-201mds from the Netherlands Government.

Redistribution:

A fundamentally new policy has been put developed. A pilot programme was established in each province, and two \hat{a} 200\224year contracts were entered into with provincial govern ments

to run the programmes on an agency basis. These are now coming to an end, and new arrangements have been negotiated with each province. The redistribution process involves a <code>i¬\202irly</code> long project cycle: typically, between one and two years. This involves

planning by the community, with the assistance of a planning grant, on how they are to use the land;

negotiations for the acquisition of land (usually privately owned);.

. establishment of a legal entity to hold the land;

planning with other Departments

(provincial and national) to provide services to the peeple; designation ofthe land for settlement; and transfer of the land. The result is that the budget for 1994/5 and 1995/6 was Very substantially under-spent, as projects started during these years are only' now coming to fruition. 240 cominunitz'es have received planning grants. During 1994 and 1995, 23projects were designated (this means the project has been planned and approved, 9 a legal entity has been established, and the funds are to be released). The pace is now picking up, as the projects come to fmition. During 1996, 3-7projects were designated - 60% more than during the previous two years together. Thus, far, 56 149 ha have been redistributed. It is anticipated that during 1997, not less than [,2 million ha willbe distributed through this programme. The Land Reform (Labour Tenants) Act was passed in. 1996.

This gives labour tenants the right to acquire ownership ofland. Land acquisition by labour tenants will start during 1997.

Tenure reform:

•

Tenure reform provides security to people who are vulnerable to eviction, and ensures that land is no longer allocated on a basis which discriminates against women. It gives these on the land the security which is necessary to enable them to invest in the land. The

Interim Protection of Informal Rights to Land Act was passed in 1996. This gives protection to the large number of peOple, mainly in the former Bantustans, who can not prove a legal right to the land which they occupy.

XVIINISTRY OF EDUCATION

3.1/2

GOALS AND'OBJECTIVES

a.

As stated in our White Paper on Education and Training, the over-arching goal of - policy must be to enable all individuals to have access to lifelong education and training, irrespective ofrace, class, gender, creed or age. This we want to achieve through an integrated approach to education and training, which links one level oflearning to another, and enables learners to progress to higher levels <code>i¬\201om</code> any starting point in the education and training system

To achieve the Ministry of Education, in collaboration with the Ministry of Labour, has appointed the South Aï¬\201'ican Qualiï¬\201cations Authority, which will develop the National Qualiï¬\201cations Framework (NQF). The Ministry aims at ensuring that all levels of the NQP will be in operation by the year 2004. It is for this reason that the Ministry is targeting 1998 as the i¬\201rst year for the implementation of the new, outcomes 200224 based curriculum. Our target again is that by the year 2004 the new curriculum will have been implemented at all levels in all grades.

The provision of 10 years offree and compulsory general education is another of our stated goals, and as we say in our White Paper, achieving this goal is central to the national development strategy, with its emphasis on human resource development. Again it is our considered view that we should target 2004 for the full implementation of this goal.

What this implies is that we must extend access into the education system by increasing the number of schools and classrooms. In this regard the Ministry aims to build 5,000 new classrooms by 1999. This will mean that we will. have catered for approximately 100 000 .more learners.

We will also need to reach out to a number of adult learners. Our aim is to reach I 400,000 adult learners through our programmes by 1999.

As part ofour drive to make education accessible to all, we will also address the education needs ofleamers with special needs. Our aim is to ensure that by 1999 we have started imPlementing policy recommendations that will have come <code>i¬\201om</code> the Commission on Learners with Special Education Needs, which is cunently workingin this area. We hope this will enable us to begin to reach the majority of learners with Special needs, especially in those areas that have been deprived before, by year 2004.

_ Another major aim is to do away with gender related problems in education, be they related to access or the curriculum. In this regard we hOpe to establish a gender equity unit in education as soon as we have received a report on how this should be done from the task team investing this at the end of 1997.

255 South Aï¬\201â\200\230icans will be trained in agricultural public sector policy analysis

- thrOugh the EDI/World Bank training programme in the next three years. Local universities will i¬\201nally internalize and take ownership of the training programme with the support of the NDA which will provide bursaries to students.

There has been a conceited $ei\neg 201\hat{a}200\230$ ort to redesign $agi\neg 201$ wltural training cum'e ula at agricmltural

colleges with the aim of complementing current deï¬\201ciencies of existing staï¬\201â \200\231. Internships .

and $ina\200\224$ service' training form the core of the strategy of re-orientating the current

extension sta $\ddot{}$ -\202 $\hat{}$ -\200\230. A working group on Extension and Traininghas been establish ed and IS

i¬\2011lly operation in effecting the above.

Farmers and Agribusiness:

International exposure trips to the Asian countries, Latin America and Africa were undertaken with the aim of exposing South $Ain\201ican$ farmers to operational conditions of

fellow farmers in these countries. To complement farmer organization development strategy, there are e<code>i¬\202</code>a $\200\230$ orts to promote commodity producer organisations with the aim of

exposing the core business of such commodities to emerging farmers. Beef, vegetables, sorghum and grape farmers are in the fore $\[in] \]$ 01ont of such new strategy approaches. The support of national and provincial farmers unions structures is the issue that will be attended in the ensuing year. The NBA will commit $\[in] \]$ 201nancial resources to implement the ese

programmes during 1997.

Transformation of the child and youth care system

At a provincial level, intersectoral committees have been established for pilot projects and

secure care- Five projects are well established and are already producing positive result ${\tt s}$ -

Inanda, KwaZulu/Natal on family preservation; Pretoria, Gauteng on family group conferencing; King Williamâ $\200\231s$ Town, Eastern Cape on residential care; one-stop you th

justice centre in Port Elizabeth; and arrest, reception and referral project in Durban, KwaZulu/Natal. These projects Will continue till 1997 after which the research Will be reviewed and replication Will be planned. The rebuilding and restructuring of secure care facilities has been initiated in Northern Province, Mpumalanga, Gauteng and the Eastern Cape. Stafi¬\201ng will be looked at as the next phase in 1997. Two hundred probation. ofi¬\201cers have received training in probation services and 1 500 child and youth care workers in state residential care facilities received training in basic child and youth care

practice up to June 19.96. In June 1996 the IMC has completed a thorough investigation into schools ofindustry, reform schools and places of safety and reported in August to Cabinet on the outcome and concerns. Cabinet approved innediate action steps to rectify serious problems on children \hat{a} 200\231s rights violations highlighted in the report. The I MC has

received considerable funding from the Dutch government through the RDP.

National management information system

A reliable national management information system is vital to measure impact ofwelfare delivery. By 1998 the system should be in place to enable us to create scenarios and plan more effectively.

This is also important for communicating the achievements of government.

Additional RDP Considerations

The Welfare White Paper and the Social Welfare Action Plan generally capture Reconstruction and DeveloPment values and goals. The Welfare Department remains conscious of the need to maintain visible delivety that will build coni $\$ 201dence among So uth

Africans. The Flagship Programme for unemployed women With children under i-201ve and the transformation of the child and youth care system are but some examples. Of concern though, is the need for the broader mobilisation of South Ai-201a/200/231ican society an und RDP

goals. The breakdown ofbasic human, community and family values lies at the heart of most ofthe social ills experienced in the country. Restoration of the values for the respect

of dignity of life, $\hat{a}200\234$ ubuntu $\hat{a}200\235$, $\hat{a}200\234$ simunye $\hat{a}200\235$ and the community and family unit are essential.

Welfare is well placed to eo-ordinate an inter-sectoral campaign aimed at the community broadly and the youth in particular to build on a progressive value system that impacts positively

on delivery through promoting a culture of service and voluntarism Consideration should be given to a mass based campaign to draw on the creative energies of churches and other religious organisations, community organisations, educational institutions and state department in a coordinated effort to build the moral in\201bre of South

Afn'can society.

role players.-
2.3
RDP TARGETS
Implementation of a National Social Security System
The social grants programme is one of governmentâ\200\231s biggest poverty reduction
programmes involving a budget totalling. R12,3 billion.
The largest numbei ulâ\200\230
beneï¬\201ciaries is old age pensioners who are the primary beneï¬\201ciaries of the R430
receive on a monthly basis. Most of the old age pensioners are breadwinners as their
pension is the only source ofincome in three-generation families. On average the old age
pensioners in a mral area shares the pension with about 12 other people in the household.
There are currently 1 455 l 10 old age pensioners in the country. This i¬\201gure exclude
s the
former Ciskei and Transkei for whom no reliable in 201gures are presently available. The
breakdown per grant type is as fellows: Old age (145 510); Grantâ\200\224inâ\200\224aiil
Disability (620 813); Veterans (12 071); Maintenance (200 644); Foster Care (38 412 );
and Care Dependency (10 000)
A major focus of the Department is the re-engineering of the management, information
and payment system so as to eliminate fraud and corruption. We are in the process of
amalgamatiqg the 14 computer systems and this process will be completed by March
1997- A committee under the chairmanship ofreverend Frank Chikane has completed its
investigation into the eEective management of social security and the evaluation of the
macro system and existing information in order to establish the nature and extent offraud
'A <code>i¬\201</code>nal report will besubmitted in January 1997.- The Department of Welfare has alrea
dу
taken steps to put in place certain initiatives to action some of the critical
recommendations of the report. These include steps towards the reâ\200\224registration of
pensioners, training of personnel in the Social Assistance Act, 1992; institution of an
audit section; a system of disciplining of in 201cials and the out sourcing of payment of
pensions. With regard to the management of the system, the Department has prepared a
memorandum to inform Cabinet ofa need for a national organised social security system
Measures are being taken to centralise the processing of application so that the time
between an application and approval should not exceed 35 working days. Pension
committees consisting mostly ofvolunteers assist pensioners in ensuring that they receive
what is due to them. The automation of the payment system and the use ofi¬\201ngerprints
as a <code>i¬\201om</code> ofpositive identi<code>i¬\201cation</code> will further ensure that pensioners get what
is due to
them- The Department is working in close collaboration With Home Aï¬\201'airs and the
NCPS. Plans that exist to ensure that pensioners have the easiest possible access to pay
```

points, include encouraging beneï¬\201ciaries to utilise the Post O&ice. Mobile units Who

pensioners in or near their communities are already operating in parts of all the provinc

except N.West, N.Cape and Free State where mobile units will be in operation in 1997.

Expanding access to family and child support beneï¬\201ts0 '.

MINISTRY FOR PROVINCIAL AFFAIRS A1112

CONSTITUTIONAL DEVELOPMENT

REPORT ON PROGRESS WITH DELIVERY OF MUNICIPAL SERVICES

1.

Goals and Targets

Thetargets used by the Department are based on the original RDP targets, Which are:

a)

b)

The RDPâ\200\231s short term aim is to provide every person with adequate facilities for health. The RDP will achieve this by establishing a national water and sanitation programme which aims to provide all households with a clean, safe water supply of 20-30 litres per capita per day (led) within 200 metres, an adequate/safe sanitation facility per site, and a refuse removal system to all urban households.

•

In the medium term, the RDP aims to provide an on-site supply of 50-60 led of clean water, improved on-site sanitation, and an appropriate household refuse collection system. Water supply to nearly 100 per cent of rural households should be achieved over the medium term and adequate sanitation facilities should be provided

to at least 75 per cent of rural households.

Community/household preferences and environmental sustainability will be taken into account.

It is envisaged that all South Africans can be given access to a basic minimum level of service, bompatible with these targets, over a ten year period.

Progress with Imglementation

There has been a substantial programme of investment in infrasu'uctln'e by municipalities over the last 2 years. The total capital expenditure budgeted for 1996/97 is R10,6 billion, which will largely be spent on municipal infrastructure services and social amenities.

,

The Depaitment has complemented and facilitated this investment programme through a system of grants (the $\hat{a}200\234$ Municipal Infrastructure Programme $\hat{a}200\235$) which assist local

authorities to provide services to the poor up to at least a basic level, as weuâ\200\231 as to

rehabilitate existing services.

2

A total of R1351,7 million has been allocated to provinces in this regard, oâfwhich R1265,5 million has already been committed to actual projects. Al! project funds will be spent by the end of 1997. A total of 1089 projects will be supported by these funds, ofwhich 369 projects are cuuently on site, and 115 projects have already been-completed. It is estimated that these projects will provide new or rehabilitated ini¬\201astmctme services to 12,14 million benei¬\201cianâ\200\230es.

The funds have also leveraged additional contributions i-2010m local authorities and the pn'vate sector, as per the following table:

10

By 1999 we hope to have established this very important unit, and by 2004 we hope to have eliminated obvious barriers to access for girls, such $\hat{a}\200\230$ as teenage pregnancy related problems, etc.

We also aim to increase panicipation in Mathematics, Science and Technology, and to improve the quality ofteaching in those areas. By the year 2005 we hope , to have produced more than 10,000 properly trained and quali \ddot{a} -\201ed maths, science and-technology teachers.

Ι

One of our goals is to transform our higher education and to make it responsive to the needs ofour country. This will require us to raise the participation levels of black students, and to change the inverted pyramid such that more participation takes place at technikons and colleges-

_

Finally, it is our hope that we will have achieved equity in education spending by 1999.

h.

i.

j.

RDP TARGETS

Education system.

-With regards to getting the systems in place we are hali- $\201$ vay through the marlg and w e

hope that by 1999 we will have all the provinces $i\neg\201mctioning$ well, and all our struct ures

as envisaged in the new system in place.

Free and compulsory education.

In the hnplementation of $\[\]$ \ 201-ee and compulsory education, we have just introduced an Ac +

which makes it compulsory for learners between ceratin ages to be at school- Our own calculation is that while this provision is now in place, it will take. some time for us to

realise it, since we have a lot of backlogs in the provision 9f classrooms. By 1999 we should be well on the way in getting enough places for these children. But we will still need more years to be able to meet the need, especially with a high population growth as we have. We may safely say that 80% of the children will be able to i-201nd places by the year

2004. We are greatly concerned when it comes to free education. Indicators are that we will only be able to provide free education for a small section of our community in 1998. Our view as the Ministry is that we should be implementing this policy on a gradual basis until we have done so fully in the next century. As we will indicate in the section, we a re

i¬\201nding a number of obstacles in the irnplementation of this policy.

,

School building and renovation programme

Regarding our school building and renovation programme we have a target of 8,000 schools that have been identii¬\201ed for renovation in all the provinces. Ofthe 8,000 schools,

2,300 have ben completed. The remaining schools will be $i\neg\201$ nished by 1999. There was a n

initial delay in the renovation of the schools due to many factors, particularly the capacity

of provinces to develop business plans in line with reconstruction and development requirements.

MINISTRY OF LAND AFFAIRS

6.1 + 2

GOALS AND OBJECTIVES

The land refonn programme has 3 major legs: restitution ofland rights, redistribution

â\200\23013â\200\22401â\200\22457 15:31

ofland, and land tenure reform. The purpose of the programme is to redress historical injustices created through forced removals; to achieve a more equitable distn'bution of land and rights in land, in order to improve both household food-security and $ei_{7}201\hat{a}$ \200\230ective and

productive use of land; and to provide secure tenure to the millions of people who mently have insecure tenure and encourage investment in the land. The programme has a particular focus on the land rights of .women, who traditionally and currently seldom have independent rights to land. The programme also aims to have a stabilising impact on widespread current and potential coni¬\202ict over land issues.

Discussion

Fundamental constraints:

The implementation of land reform operates under four fundamental restraints, some of which are referred to below in more detail. These are the following:

a.

b.

c.

d..

Land reform is a <code>inl201</code>mdamentally newprognmmze of government. It is not a matter ofre-shaping or re-prioritising existing programmes. The consequence of this is that new policies, laws, and implementation mechanisms have had to- be devised, and new staffhave had to be employed and sometimes trained. Existing staff have had to be re-trained.

The ,5?fo available in terms of the new establishment approved late in 1994 are extremely limited. There are only 400 posts available for land reform It is obvious that this is a very small number of dedicated posts for a large national programme. The process of <code>i¬\2011ling</code> those posts is only now being completed.

The budget available for land reform is very limited. It is approximately 0,33% of the national budget after interest payments have been deducted.

The disadvantagedposition of women is the .result of a large number offactors, only some of which can be addressed through land reform. The achievement of the work being done by other Departments to deal with this therefore has a fundamental impact on the ability of Land Affairs to address this issue.

6.3

RDP TARGETS .

Restitution:

As required by the Constitution, the Restitution of Land Rights Act was paSsed in 1994 to create the legal framework and process for restitution The Commission. for Restitution of Land Rights and the Land Claims Court were established. Progress thus far has not been acceptable.

13â\200\22461-97 15:32

FROM:

1?

PAGE 1 1

17

The Communal Property Associations Act was passed in 1996. This creates a new legal institution through which communities can hold land on a democratic and nondiscriminatory basis. The <code>i¬\201rst</code> communal preperty association has now been registe red.

The Land Reform (Labour Tenants) Act of 1996 gives labour tenants (estimated at 40 000 peeple) immediate security on theland they have occupied for two generations.

Progress anticipated during 1997, 1998 and 1999

Restitution

As set out above, land refonn is now taking off. The rate of restitution cases will incre

at least Wold during 1997. The amount of land transferred through the redistribution will increase from less than 60 000 ha so far, to not less than 1,2 million ha during 1997. Policy on redistribution will be i-201uther developed. The two most promising changes ar e:

making municipal commonage land available to the poor living in towns and villages (the $i\gamma$ 201rst two projects have been approved to test the policy); and developing a smallhold er

policy which makes it easier for individuals to acquire land.

~

Land tenure .

Two major developments will take place in tenure reform- Legislation will be introduced to prohibit unfair evictions of rural dwellers, and to assist them to obtain long200

security oftenure- And policy is being developed and implemented on a $\hat{a}\200\234$ test case $\hat{a}\200\235$ basis

to transfer former Bantustan and SA Development Trust land to the bene $\[\neg\]$ 201cial occupier s.

(At the moment, almost all of this land is owned by the State). As this policy is implemented, ownership of a large amount of land will be transferred to the present occupiets- probably about 10% of the [andm the country. This will take place between 1997 and 1999

C.

- Redistribution

On the basis of present progress, it is projected that the anticipated transfer of $1,2\,\,\mathrm{mil}$ lion

ha in 1997 through the rediWibuï¬\201on programme will be maintained and increased to a limited extent in 1998 and 1999. The total land transferred during the three years in question should therefore be between 4 and 5 million ha. Together with the restitution programme, the total should be more than 5 million ha Any more substantialmcrease is dependent on staffto carry out this activity, and funds for the purchase of private land

We anticipate that during the 1997/8 i-201nancial year, for the i-201rst time, the full budget

allocation will be spent. State land is a potentially valuable resource for redistributio ${\tt n}$.

However, this depends on the existence of a comprehensive register of all State land ,and how it is currently being used. Work is being done on this in co-operation with the Department of Public Works. The RDP stated that the aim of the programme must be to redistribute 30% of agricultural land within the i-201rst i-201ve years of the programme. This

included $\hat{a}200\234$ strengthening property tights of communities already occupying land $\hat{a}200\235$. The

statistics above demonstrate that this will not be achieved under present constraints. If all

of the projections set out above are met, the total land redistributed (including tenure

reform in the former Bantustans by transferring ownership to the present occupiers) will not exceed 15% of agricultural land. This i-201 gure is itself ambitious, and depends on speedy

and $ein\201a\200\230$ ective implementation of tenure reform, which 15 a staE-intensive activity. At

present the sta $\[\]$ 201 $\[\]$ 200 $\[\]$ 230 to carry it out do not exist

13

Community forestry is to a large degree still a new concept and although much progress has been made, further developments may be impeded by the lack of capacity and funds within the Department to provide the necessary support and extension services on the one hand and lack ofunderstanding and competences on the part of the communities. Strong support by the international community (especially by the Finnish, Danish and Irish governments) has however been very encouraging.

. MINISTRY OF HOUSING

5.1 + 2

GOALS AND OBJECTIVES

The ANC, in its election campaign, promised the electorate the delivery of 1 million . houses in the $i_7\201$ ve years to 1999.

Discussion

In implementing this goal a number of factors had to be addressed, which has taken a considerable period of time. Besides the policy and institutional legacies of the aparthei d

era, the major policy obstacles mitigating against success in the housing sector include these:

~ ~

~ ~

the overwhelming poverty of the majority of the pepulation;

the i¬\201scal constraints on government;

the legacy of inappropriate institutional, legal, i-201 nancial policies and i-201 amew-orks;

3. $in\201$ mdamental breakdown of the housing sector in the period before the elections; long lead times;

time required to implement a new policy, Within the framework of a new Constitution;

and ether factors, many ofwhich have been experienced by other ministries.

Because of the long lead times, and. the policy uncertainty that existed in the i-201rst' period

ofgovernment, a broad dual approach was adopted. On the one hand, attention was paid to the policy formulation, . design and implementation process (a national framework) while, simultaneously, housing demand was stoked through the continuous feeding of subsidies into the system. The two approaches started to merge in 1996.

. 5.3

a.

RDP. TARGETS

1 Million houses in 5 years (1999).

The ANC can and should remain committed to the target of 1 million houses that will be completed or in construction in the period to 1999. In January 1997, we can report that a total of 115,000 houses have been completed or commenced for families qualifying for

the subsidy. Over 80% of the subsidies are being received by households with an income of less than R801 per month - the poorest of the poor. Because of the poverty factor, only 16% of houses subsidised thus far have been able to access private sector $i^2 \cdot 201$ nance, although the trend is improving.

n.

National Drug Policy and Essential Drug Policy.

We have developed a national drug policy which will ensure that high quality drugs are. 'accessible and aï¬201â200230ordable to all South Africans. Since April 1996, an essential Drug List -

(EDL) was introduced at primary health care level. We are coni \neg \201dent that an EDL will be

available at all levels of Care by 1998. During this year we will pass regulations on the licensing ofdispensing doctors. To make drugs affordable a professional fee will be paid for dispensing instead of a proï¬\201t mark up.

We will consider parallel importing of essential drugs if we cannot purchase drugs at affordable prices locally. We will deal with the theft of drugs $ei_{200}230ectively$

Ο.

{3.

q.

.

Intersectoral Collaboration

Health problems have many and complex causes whose solution demands an intersectoral approach Up to now there has been very little collaboration amongst the various sectors to maximise the health benein\201ts for the nation- Although it is important to improve a cress

to health services, it should also be recognised that this will have limited impact on reducing the burden of disease and the gross discrepancies in health status. An intersectoral apprOach is necessary if the extensive role of other interventions in health

promotion is to be fully rectognised and promoted. The present initiative of cooperation and collaboration amongst the ministries representing the social and economic sectors must be encouraged and sustained.

Social Health Insurance

Private health care i-201nancing, particularly through medical schemes, faces a number of

problems, such as the cost escalation, undermining ofcross subsidisation and risk pooling

and poor supervision and management. People who are employed and covered by medical schemes are increasingly being forced to opt out of the private sector and utilise public hospitals, which they do without paying fees. This is mainly due to increasing costs of medical schemes. The Department of Health has established a technical task team to investigate the development of a health insurance coverage. This insurance will allow public hospitals to bill employed workers and their families for hospital treatment, thus bringing more revenue into the public health system.

Local Government

We welcome the democratisation of local government. This will enhance the delivety of health care services at the local level. In the medium to long term, primary health care services at local level should be delivered by local government. However, in many instances, provinces will continue to deliver these services in many areas whilst also building the necessary capacity in local government to take over these <code>i¬\201mctions</code>. We have

adapted a district based model for the delivery ofhealth care services at local level to ensure that the delivety ofthese services is decentralised to the lowest appropriate leve 1

and the rational utilisation of available resources, taking into account economies of sca le

- and capacity within local government. We have already commenced discussions with local government with a View to integrating the 'delivexy of health services at local level and to

systematically build $\tilde{A} \odot \text{apacity}$ in local government to implement the district health system.

Report of the Social Sector 011 the Implementation of the .

Reconstruction and Development Programme

INTRODUCTION

The achievements of the ANC during the past two and a half years have been remarkable, nomithstanding the challenge of transforing a facist regime into a peopleâ $\200\231s$ government founded

upon sound democratic and constitutional principles. This review comes at a critical time during

our term of ofi¬ $\201$ ce. We are convinced that this government is on course. We will renew our

strength and commitment to implement the goals of the Reconstruction and DevelOpment Programme. The budget constraints should not distract us $i_7\201$ om our main objective objective to

improve the lives of our peeple and to provide their basic needs.

This report re $\[\neg\]$ 202ets on the social sector and hence attempts to re $\[\neg\]$ 202ect in the Sou th African reality

how we are ensuring thset a good education is accessible to all, health services are available to

all, social security and social welfare and meeting the basic needs through food security , water,

housing, sport and recreation- The above mentioned are not only conditions but objectives of

social develoPment and integration.

1.

'MINISTRY OF HEALTH

v-

1.1

1.2

OBJECTIVE

The primary objective of the ANC is to create a single, comprehensive and integrated National Health System which includes public and private sector resources and is organised at national, provincial and lo'cal level.

GOALS

Our goals were to unit? the i-201 agmented sewiees that we inherited, to entrench primary health care, to promote equity, access and appropriate utilisation of all health resource s.

to invest in human resource development and to ensure community participation in the planning, provision, control and monitoring ofhealth cafe services.

1.3

RDP TARGETS

a.

_

To form a single National Department of Health. Within 6 months in government, we amalgamated all the fragmented health departments and formed one national health department and nine provincial health departments. Now that local government has been democratised, we are engaged in discussions with organised local government to establish the district health system as a model for health care delivery at the local level.

14

- Conditions for success .

In committing the Ministry and the Department to reaching this goal, however, the following fundamental environmental factors need to be in place: the support of governmentâ\200\231s social partners; respect for due legal processes, and the vigorous enforcement of legal contract; the programmatic enhancement of capacity at provincial and local levels; long term budgetaJy certainty at national level; the timely provision of

land and services (local govt); support for a saving-driven deliver culture by housing consumers. In short – the Ministify and the Department are con $\ddot{}$ -\201dent that as a govern ment

and as a movement, we can meet the housing commitments made for the election, but cannot do so without the clear and ongoing support indicated above.

In keeping with the i-201gure of 1 million houses, however, political integrity Will require us

to be clear that are talking about this government having subsidised a million houses that t

are either completed or in construction in the period to 1999. This is in keeping with the

Declaration of Commitment made by the National and Provincial governments, and endorsed by all relevant national interests, at Botshabelo in 1994. Our current projections

indicate that, during 1997, an additional 192,765 subsidised housing units will enter (an d,

in many cases, complete) production. Details of the expected housing delivery programme are set out in the table below.

11

However, these seem to have been overcome, and a number of business plans have been approved recently, and the renovation is expected to accelerate in 1997. The school building programme is also continuing and approximately 200 schools have been built in all provinces so far. As stated earlier the target for 1999 is 5,000 new classrooms.

Changes in targets

It is our view that in education the targets we set ourselves for 1999 were realistic, an

if a few minor obstacles are removed, they could still be reached. We therefore do not believe that these should be changed. However, we are concerned that the impact of the Macro-Economic Framework on these and other targets may be very big.

MINISTRY OF WATER AFFAIRS AND FORESTRY

4.1/2

GOALS AND OBJECTIVES

Community Water Supply and Sanitation

The Department of Water Affairs and Forestry $\hat{200} = 0.01$ Community Water Supply and Sanitati on

Programme was ir $\ddot{}$ -\201tiated in 1994 to achieve a Constitutional objective of ensuring th at all

South Aï¬\201icans have access to sufï¬\201cient water and a healthy environment.

Forestry

Trees play a vital role in most South African households not only as an enhancement of the environment, but also and especially in rural and informal settlements, as an energy source for more that one third of South Aï¬\201icaâ\200\231s pepulation- These people still depend

directly on trees as a source of timber for housing, kraals and local craft industries and of

hits and medicinal products. In order to address this need and to increase the sustainable ${\sf e}$

and accessible supply ofwood to those peOple who rely on it for survival, the Department facilitates community forestry development throughout the country by initiating and supporting community-driven development and management of the resource.

,4.3

RDP TARGETS

a.

_

Community water supply and sanitation

Over 700,000 previously unserved pe0ple have already been supplied with water and R3 00 million spent. Over 10,000 person-months of paid work has been generated and more than 35,000 person-days of training given. This is in addition to the approximately 6 million people served by existing schemes operated by the Department. A network of provincial planning forums _'to guide the community water supply and sanitation programme was established and a national assessment of water and sanitation needs was completed. R1 585 million was allocated by the end of 1996 and 706 projects started which will ensure that a total of 6.4 million people gained access to water supplies and

100,000 to adequate sanitation. The 4th annual programe projects to serve a further 2.1 million people at a cost of R650 million has recently been announced. It is expected that R700 million will be Spent in 1997 and R1 000 million in 1998.

FROM:

IF

PAGE 2% w

4.

5.

7.

The Ministry of Housing is committed to reaching the goals of the RDP provided the following fundamental environmental factors are in place, i.e. the support of governmentâ \200\231s

social partners; respect for due legal processes, and the vigorous enforcement of legal contract; the programmatic enhancement of capacity at provincial and local levels; long . term budgetary Certainty at national level; the timely provision of land and services (local

government).

Thus far the macro-economic $i\sqrt{201}$ amework has not yet had an impact on land reform. Existing budgetary constraints have so far not substantially limited land reform Their major concern is the insufi¬\201cient human resources to ei¬\201ectively carry out the pr egamme.

There has also been no discernible impact by the Macro-economic Framework on the redistribution of agricultural land. It15 however evident that increased budgetary and human resources will need to be allocated when the process of agricultural land redistribution comes into "\201"\2021 swing. This will necessitate reâ\200\224prioritis ation of programmes

and budgetary expenditure. Areas that need to be una\200\224blocked in order to facilitat e greater

agricultural land redistribution include the restructuring of the statutory in 201nancial institutions such as the Land Bank, equalisation of lending rates by the statutory in 201n

institutions at both the national and provincial levels to encourage efin\201cient and accountable management of agricultural in 201 nancial resources; and the resolution of the current R13 billion debt to the state.

The Macro Economic framework has provided a broader context for the substantial programme of investment envisaged for municipal infrastructure. It has increased the _ prionty status of the Municipal Infrastructure Programme, emphasised the importance of job creation and training. in the programme, and created a greater emphasis on . partnerships between public and private sectors in the delivery of municipal infrastructu

The Department of Provincial Affairs and Constitutional Development has played a key role in implementing the strategy for Growth, Employment and Redistn'bution by focusing on investment in municipal mfrastructure, promoting partnerships between the public and private sector at local government level, stabilising local government i¬\201nances and improving the municipal debt problem.

In Summary, evety Ministiy is committed to the Macro-economic Framework. They are concerned about budget cuts in the social sector which may fall to below the existing fun ding

levels because this will compromise the implementation of RB? policies and targets to whi ch this

government is committed. Perhaps better understanding and coordination bemeen the social and

economic sectors will allay their fears and lay the foundation for political leadership i

implementation of the RDP within the "in\201mnework of a coherent growth and development st rategy.

PAGE 1 3

19

T0 date, less than 10% of this state-owned agricultural land has been transferred to the previously disadvantaged farmers through leasehold in the various provinces. It must be noted that the i-201gure could be more when one takes into consideration restitution cases

as well as redistribution ofland where either communities by land as groups or individual s-

The di $\[\]$ \cap 201culty where land is bought in groups the extend of agrimltunl acthrity cannot be

guaranteed. At the current rate of redistributing $agi¬\201culmral\ land$, it is doubtful whether

the original target of 30 million ha will be realised by the year 1999. The formula for redistribution of agticultural land needs to be changed by, among others: clearly» identifying the different beneï¬\201ciaries of agn'cultural land redistributiOn; removing all

artiï \neg \201cial credit, $\ddot{\neg}$ \201nancial, marketing, and procurement distortions as a prerequisite for the

success of an agricultural land redistribution programme; investigating a range of option \mathbf{s}

to fast \hat{a}^200^24 traek the delivery of agricultural land; extending long-term rental or le ase

agreements (at least 30 years) on all state owned agticultural land to targeted farmers a nd;

addressing the total fanning investment requirements of a targeted bene $i^{-201ciaxy}$ in ord er to

realistically determine the state grant and its elements that is absolutely necessary for a

viable family farming unit.

,

 $\text{Deâ}\200\224 racialisation}$ of the sector both in production and public sector representation

There has been a growing involvement by commercial black farmers in the various agricultural industries suCh as horticulture, sugar cane, livestock and grain. The contribution of these farmers in terms of their market share , whether in the specii \neg \201

industries or in the entire production is still negligible. There is potential to increas

improve the market share of these farmers by focusing both on the challenges faced by the already existing black commercial farmers and the new entrants who will be neë¬\201t from the

land reform progmmme. Speci $\ddot{\}$ 201c programmes which are targeted to the various types of the farm sector need to be designed and implemented. These could include programmes that target young pecple and women into the sector. It may als'o mean targeting speci $\ddot{\}$ 201c

industries Where in black farmers may be encouraged to invest.

Support Services

Speciï¬\201c complementary . programmes such as reâ\200\224training extension in the Nort hern

Province in collaboration with GTZ (German Development Agency) has been implemented. The overall objective of the new agricultural <code>i¬</code>201nancing programme is to broaden its access to all farmers, especially the new emerging farmers; Since 1993/94 to 1996/97 <code>i¬</code>201nancial years, a total of R171 million was budgeted for various assistance schemes for emerging farmers. Over the period, R34 million was actually extended as credit to a total of 9000 new farmers. The combination of research, technology – development and transfer has the capacity to increase the ability of smallholder fanners to gain higher productivity and realise reasonable return on their investment. This however, will depend on the capacity of 'the extension to keep abreast of developments in these <code>i¬</code>201elds

Free health care forchildren under 6 years of age.

At the Opening of Parliament on 24 May 1994, the President proneunced that health care for children under 6 years of age will be free in all public health care facilities. This presidential decree was implemented in June 1994.

.C.

To improve access to womenâ\200\231s health.

This was implemented simultaneously with the free'health care for children. As from 1 June 1994, every woman in South Africa was entitled to i-202ee health care during pregnancy, birth and after child birth.

Immunisation coverage of children to reach 90% by 1997

A study which was done in 1994 revealed that only 63.3% of children at 1 year were appropriately immunised in SA. This is mainly due to lack of primary health care facilities

especially in rural areas as well as lack of adequate logistical support. Because we have launched a major clinic upgrading and building programme, it will be possible to reach an immunisation rate of between 80% - 90% by 1999. The World Health Organisation target for the year 2000 is 80%.

Eradication of polio and measles by 1996.

'South Ai¬201â200230ica has been declared a polio-free country. Measles has not been eradicated yet.

In 1994 our measles coverage for children under 1 year was 84.5%. It is doubtful whether we will reach our RDP target by 1996 because our primary health care network is still expanding. We are establishing an epidemiological surveillance system to keep this problem under control.

Right to choose whether or not to have early termination of pregnancy. One of our most recent victories was the passing of the Termination of Pregnancy Bill which will be implemented during 1997. This Act will save over 400 women who die annually and thousands $\sin \sqrt{202 \hat{a}} 200 \sqrt{230}$ serious infections due to back street abortion s.

Programme to eradicate Tuberculosis.

Tuberculosis still remains a major problem in South Africa. There are on average approximately 222 infected persons per 100,000. In' 1995 there were 90,000 new cases of TB and 3,000 deaths reported. A team led by the World Health Organisation conducted a review of our TB control programme. They proposed a strategy that has been proven worldwide to reduce tuberculosis. The Department has adopted this strategy and we are monitoring progress. The target is to achieve a cure rate of 80% in smear positive cases.

â\200\230

.

Sexual health and HIV/AIDS.

I-IIV/AIDS still remains a serious threat to humanity and the economy of South Africa. Unfortunately, conventional methods of promoting disease prevention are not e<code>i¬\201</code> 2 00 \230ective

in preventing the spread of HIV/AIDS. HIV prevalence continues to rise sharply, especially amongst the youth. Each day, there are more than 500 new HIV cases. The most a<code>i¬\201ected</code> provin<code>â\200\230ces</code> are <code>KwaZuluâ\200\224Natal</code>, <code>Mpumalanga</code> and <code>Gauteng</code>. H IV/AIDS is not

. just a health problem. We need a concerted and coordinated eï¬\201btt on the part of

government,	nonâ\200\224govemmental	organisations,	the	private	sector	and	civil	society.

Improved access to emergency services through provision of more 24hr services. This target has not been achieved in full. Since July 1996, provinces have commissioned more clinics that will provide a 24hr service. One ofthe major problems in realising this target is the shortage ofhuman resources, especially doctors in peripheral and rural area

In some areas health workers are refusing to work beyond their normal working hours, even with overtime pay, especially local government employees. The provinces are pursuing discussions with organised labour and local government regarding this. Violence is also a threat to health personnel working after hours especially in remote areas. Communities need to be mobilised to protect these services. The ambulance service still needs a major restructuring

National Health Information System.

It is critical to have adequate and reliable information for planning. We have establishe

a National Health Information Committee which has members from the national health department, provincial health departments, private sector and research institutions. A national health information strategy has already been developed. It has been decided to organise this infomation at provincial level <code>i¬\201rst</code> and then consolidate it nationally . All the

province have identii¬ $\201ed$ i¬ $\201nancial$ resources to purchase computer hardware. The majority

of provinces have already issued tenders for the software. We are coni-\201dent that this target

will be achieved by 1999.

Human resource development

Human resource developmentIS one of our key strategies for transforming the health sector. During the past two years we have concentrated on training pnmaxy health care nurses who can work as independent practitioners with minimum supervision especially in penpheral mm] and mote areas. We have also focuoood on management tlaiiuug. Tlu: retraining and re-oxientation of health workers has unfortunately been slow

Free health care in 5 years.

Since 1 July 1996, all South $Ai \neg \ 201icans$ have enjoyed free health care services at the p rimary

level. This has been achieved to a large extent through the _re.prioritising of the curre nt

health budget. Initially the implementation of this programme caused problems as all facilities were heavily utilised by the public. The i-2011 benei-201 of this programme will never

be realised as its value cannot be quanti $\[\neg \]$ 201ed in rands and cents but by the diseases which

have been prevented and deaths which have been averted.

.

Equitable allocation of resources

Until the 1996/7 i-201nancial year, the National Department has been responsible for distributing the budget amongst all the provinces. A formula base on pOpulation and other relevant health indicators was used to ensure equity in distributing resources. As i-201 om this

year the Financial and Fiscal Commission (PFC) has made new recommendations on how resources will be distributed amongst the various provincial departments, i.e. via block grants to provinces. The implications for equity using this method have not been studied.

RDP TARGETS

,

Implementation of a National Social Security System

The social grants programme is one of government $\hat{a}\200\231$ s biggest poverty reduction The largest number of

programmes involving a budget totalling. R12,3 billion.

beneï¬\201ciaries is old age pensioners who are the primary beneï¬\201ciaries of the R430 that they

receive on a monthly basis. Most of the old age pensioners are breadwinners as their pension is the only source ofincome in three generation families. On average the old age pensioners in a rural area shares the pension with about 12 other people in the household

There are currently 1 455 110 old age pensioners in the country. This i-201gure excludes the

former Ciskei and Transkei for whom no reliable i-201gures are presently available. The breakdown per grant type is as follows: Old age (145 510); Grantâ $200\224$ in-aia (10 576); Disability (620 813); Veterans (12 071); Maintenance (200 644); Foster Care (38 412); and Care Dependency (10 000)

A major focus of the Department is the re-engineering of the management, infermation and payment system so as to eliminate fraud and corruption. We are in the process of amalgamating the 14 computer systems and this process will be completed by March 1997- A committee under the chairmanship of reverend Frank Chikane has completed its investigation into the $e\ddot{\imath}$ 022 $\hat{\imath}$ 200\230ective management of social security and the evaluation of the

macro system and existing information in order to establish the nature and extent of frau d.

 $^{\prime}\text{A}$ in 201nal report will be submitted in January 1997.- The Department of Welfare has already

taken steps to put in place certain initiatives to action some of the critical recommendations of the report. These include steps towards the re-registration of pensioners, training of personnel in the Social Assistance Act, -1 992; institution of an audit section; a system of disciplining oi¬\201icials and the out sourcing of payment of pensions. With regard to the management of the system, the Department has prepared a memorandum to inform Cabinet of a need for a national organised social security system Measures are being taken to centralise the processing of application so that the time Pension

between an application and approval should not exceed 35 working days.

committees consisting mostly ofvolunteers assist pensioners in ensuring that they receive what is due to them. The automation of the payment system and the use of $i^2 201$ arrive as a from ofpositive identii201 cation will $i^2 201$ arrher ensure that pensioners get what is due to

them. The Department is working in close collaboration with Home Main and the NCPS. Plans that exist to ensure that pensioners have the easiest possible access to pay points, include enouumging beneï¬\201ciaries to utilise the Post Oï¬\202ice. Mobile units who serve

pensioners in or near their communities are already operating in parts of all the provinc es

except N.West, N.Cape and Free State where mobile units will be in operation in 1997.

Transformation of the child and youth care system

At a provincial level, intersectoral committees have been established for pilot projects and

secure care. Five projects are well established and are already producing positive result ${\sf s}$ -

Inanda, KwaZulu/Natal on family preservation; Pretoria, Gauteng on family group conferencing; King Williamâ $\200\231$ s, Town, Eastern Cape on residential care; one-stop yo uth

justice centre in Port Elizabeth; and arrest, reception and referral project in Durban, KwaZulu/Natal. These projects will continue till 1997 alter which the research will be reviewed and replication Will be planned. The rebuilding and restructuring of secure care facilities has been initiated in Northern Province, Mpumalanga, Gauteng and the Eastern Cape. Stafi¬\201ng will be looked at as the next phase in 1997. Two hundred probation. ofi¬\201cers have received training in probation sewices and 1 500 child and youth care workers in state residential care facilities received training in basic child and youth care

practice up to June 1996. In June 1996 the MC has completed a thorough investigation into schools of industry, reform schools and places of safety and reported in August to Cabinet on the outcome and concerns. Cabinet approved immediate action steps to rectify serious problems on childrenâ\200\231s rights violations highlighted in the report. The [MC has

received considerable funding from the Dutch government through the RDP.

h.

National man agement information system

A reliable national management information system is vital to measure impact of welfare delivery. By 1998 the system should be in place to enable us to create scenarios and plan This is also important for communicating the achievements of more effectively.

government.

Additional RDP Considerations

The Welfare White Paper and the Social Welfare Action Plan generally capture Reconstruction and DeveloPment values and goals. The Welfare Department remains conscious of the need to maintain visible delivery that will build coni¬\201dence among S outh

Africans. The Flagship Programme for unemployed women With children under $i^2 = 0$ and the transformation of the child and youth care system are but some examples. Of concern though, is the need for the broader. mobilisation of South $i^2 = 0$ around RDP

goals. The breakdown of basic human, community and family values lies at the heart of most ofthe social ills experienced in the country. Restoration of the values for the respect

of dignity of life, $a\200\234$ ubuntu $a\200\235$, $a\200\234$ simunye $a\200\235$ and the community and family unit are essential.

Welfare is well placed to co-ordinate an inter-sectoral campaign aimed at the community broadly and the youth in particular to build On a progressive value system that impacts on delivery tln'ough promoting a culture of service and voluntarism. positively

Consideration should be given to a mass based campaign to draw on the creative energies of churches and other religious organisations, community organisations, educational histitutions and state department in a coordinated effort to build the moral in 201bre of South

African society.

17

The Communal Property Associations Act was passed in 1996. This creates a new legal institution through which communities can hold land on a democratic and nondiscriminatory basis. The <code>i¬\201rst</code> communal preperty association has now been registe red.

The Land Reform (Labour Tenants) Act of 1996 gives labour tenants (estimated at 40 000 peeple) immediate security on theland they have occupied for two generations.

Progress anticipated during 1997, 1998 and 1999

Restitution

As set out above, land refonn is now taking off. The rate of restitution cases will incre

at least Wold during 1997. The amount of land transferred through the redistribution will increase from less than 60 000 ha so far, to not less than 1,2 million ha during 1997. Policy on redistribution will be i-201uther developed. The two most promising changes ar e:

making municipal commonage land available to the poor living in towns and villages (the $i\gamma$ 201rst two projects have been approved to test the policy); and developing a smallhold er

policy which makes it easier for individuals to acquire land.

~

Land tenure .

Two major developments will take place in tenure reform- Legislation will be introduced to prohibit unfair evictions of rural dwellers, and to assist them to obtain long200

security oftenure- And policy is being developed and implemented on a $\hat{a}\200\234$ test case $\hat{a}\200\235$ basis

to transfer former Bantustan and SA Development Trust land to the bene $\[\neg\]$ 201cial occupier s.

(At the moment, almost all of this land is owned by the State). As this policy is implemented, ownership of a large amount of land will be transferred to the present occupiets- probably about 10% of the [andm the country. This will take place between 1997 and 1999

C.

- Redistribution

On the basis of present progress, it is projected that the anticipated transfer of $1,2\,\,\mathrm{mil}$ lion

ha in 1997 through the rediWibuï¬\201on programme will be maintained and increased to a limited extent in 1998 and 1999. The total land transferred during the three years in question should therefore be between 4 and 5 million ha. Together with the restitution programme, the total should be more than 5 million ha Any more substantialmcrease is dependent on staffto carry out this activity, and funds for the purchase of private land

We anticipate that during the 1997/8 i-201nancial year, for the i-201rst time, the full budget

allocation will be spent. State land is a potentially valuable resource for redistributio ${\tt n}$.

However, this depends on the existence of a comprehensive register of all State land ,and how it is currently being used. Work is being done on this in co-operation with the Department of Public Works. The RDP stated that the aim of the programme must be to redistribute 30% of agricultural land within the i-201rst i-201ve years of the programme. This

included $\hat{a}200\234$ strengthening property tights of communities already occupying land $\hat{a}200\235$. The

statistics above demonstrate that this will not be achieved under present constraints. If all

of the projections set out above are met, the total land redistributed (including tenure

reform in the former Bantustans by transferring ownership to the present occupiers) will not exceed 15% of agricultural land. This i-201 gure is itself ambitious, and depends on speedy

and $ein\201a\200\230$ ective implementation of tenure reform, which 15 a staE-intensive activity. At

present the sta $\[\]$ 201 $\[\]$ 200 $\[\]$ 230 to carry it out do not exist

By 1999 we hope to have established this very important unit, and by 2004 we hope to have eliminated obvious barriers to access for girls, such $\hat{a}\200\230$ as teenage pregnancy related problems, etc.

We also aim to increase panicipation in Mathematics, Science and Technology, and to improve the quality of teaching in those areas. By the year 2005 we hepe .. to have produced more than 10,000 properly trained and qualiialpha201ed maths, science

and'technology teachers.

One of our goals is to transform our higher education and to make it responsive to the needs of our country This will require us to raise the participation levels of black students, and to change the inverted pyramid such that more participation takes place at technikons and colleges

Finally, it is our hope thatwe will have achieved equity in educationspending by 1 999.

h.

ı.

j.

RBI? TARGETS

Education system.

-With regards to getting the systems in place we are halfway through the marl; and we hope that by 1999 we will have all the provinces functioning well, and all our structures as envisagedIn the new system in place.

Free and compulsory education.

In the ixnplementation of $i\neg\201'$ ee and compulsory education, we have just introduced an

which makes it compulsory for learners between ceratin ages to be at school. Our own calculation15 that while this provision is now in place, it will take some time for us to realise it, since we have a lot of backlogs1n the provision of classrooms. By 1999 we should be well on the way in getting enough places for these children But we will still need more years to be able to meet the need, especially with a high population growth as we have. We may safely say that 80% ofthe children will be able to <code>i¬\201nd</code> places by the year

2004. We aregreatly concerned when it comes to free education Indicators are that we will only be able to provide free education for a small section of our community in 1998. Our view as the MinistryIS that we should be implementing this policy on a gradual basis until we have done so fullyln the next century. As we will indicateln the section, we are <code>i¬\201nding</code> a number of obstacles in the itnplementation of this policy.

School building and renovation programme

Regarding our school building and renovation programme we have a target of 8,000 schools that have been identiin 201ed for renovation in all the provinces. Of the 8,000 schools,

2,300 have bell completed. The remaining schools will be $i\neg\201$ nished by 1999 There was a n

initial delay in the renovation of the schools due to many factors, particularly the capacity

of provinces requirements.	to	develop	business	plans	in	line	with	reconstruction	and	develOpment

6.1 + 2

GOALS AND OBJECTIVES

MINISTRY OF LAND AFFAIRS

The land refonn programme has 3 major legs: restitution ofland rights, redistribution

ofland, and land tenure reform. The purpose of the programme is to redress historical injustices created through forced removals; to achieve a more equitable distn'bution of land and rights in land, in order to improve both household food-security and $ei_{7}201\hat{a}$ \200\230ective and

productive use of land; and to provide secure tenure to the millions of people who mently have insecure tenure and encourage investment in the land. The programme has a particular focus on the land rights of .women, who traditionally and currently seldom have independent rights to land. The programme also aims to have a stabilising impact on widespread current and potential coni¬\202ict over land issues.

Discussion

Fundamental constraints:

The implementation of land reform operates under four fundamental restraints, some of which are referred to below in more detail. These are the following:

a.

b.

c.

d..

Land reform is a <code>inl201</code>mdamentally newprognmmze of government. It is not a matter ofre-shaping or re-prioritising existing programmes. The consequence of this is that new policies, laws, and implementation mechanisms have had to- be devised, and new staffhave had to be employed and sometimes trained. Existing staff have had to be re-trained.

The ,5?fo available in terms of the new establishment approved late in 1994 are extremely limited. There are only 400 posts available for land reform It is obvious that this is a very small number of dedicated posts for a large national programme. The process of <code>i¬\201lling</code> those posts is only now being completed.

The budget available for land reform is very limited. It is approximately 0,33% of the national budget after interest payments have been deducted.

The disadvantagedposition of women is the .result of a large number offactors, only some of which can be addressed through land reform. The achievement of the work being done by other Departments to deal with this therefore has a fundamental impact on the ability of Land Affairs to address this issue.

6.3

RDP TARGETS .

Restitution:

As required by the Constitution, the Restitution of Land Rights Act was paSsed in 1994 to create the legal framework and process for restitution The Commission. for Restitution of Land Rights and the Land Claims Court were established. Progress thus far has not been acceptable.

MINISTRY FOR PROVINCIAL AFFAIRS A11;

CONSTITUTIONAL DEVELOPMENT

REPORT ON PROGRESS WITH DELIVERY OF MUNICIPAL SERVICES

1.

Goals and Targets

Thetargets used by the Department are based on the on'ginal RDP targets, which are:

a)

b)

The RDP $\hat{a}\200\231S$ short term aim is to provide every person with adequate facilities for The RDP will achieve this by establishing a national water and health.

sanitation programme which aims to provide all households with a clean, safe water supply of 20-30 litres per capita per day (led) within 200 metres, an adequate/safe sanitation facility pel site, and a refuse removal system to all urban households.

In the medium term, the RDP aims to provide an on-site supply of 50-60 led of clean water, improved on $200\224$ site sanitation, and an appropriate household refuse collection system. Water supply to nearly 100 per cent of rural households should be achieved over the medium term, and adequate sanitation facilities least 75 per cent of rural households.

should be provided

Community/household preferences and envilonmental sustainability will be taken into account.

to

at

It is envisaged that all South Africans can be given access to a basic minimum level of service, bompatible with these targets, over a ten year period.

2.

Progess with Imglementation

There has been a substantial programme of investment in ini \arrowvert 201'asi \arrowvert 202uctme by municipalities over the last 2 years. The total capital expenditure budgeted for 1996/97 is R10,6 billion, which will largely be spent on municipal infrastructure services and social amenities.

The Depamnent has complemented and facilitated this investment programme through a system of grants (the $a\200\234$ Municipal lni¬\201'astrueture Programme $a\200\235$) which assistlocal

authorities to provide services to the poor up to at least a basic level, as well as to rehabilitate existing services.

12.

The i¬\202agship programme

A i^2 02agship programme targeting unemployed women with children under i^2 01ve was launched during 1996.

The intention of the programme is inter alia to provide

impoverished women with an opportunity to develop skills and to become economically independent and not to be reliant on state grants. Aï¬ $\201er$ -the launch of all the planne d

reached by this programme, is 6,240. If the programme proves successful in the dii \neg \202â \200\230erent

areas, it will be replicated and will reach more people. The programme is to run for 18 months before replication is considered.

services will be expanded particularly in poor â\200\231and

The implementation of developmental social welfare

We have started a process to move away from expensive institution based services to community $200\224$ based services, especially in the -201 eld of caring for the aged. It is hoped that

through this process,

black

communities. By 1997, community support programmes will be in place in all provinces, targeting marginalised groups for integration into society, for released prisoners, persons

with HIV/AHDS and children in $coni¬\202ict$ with the law. Similarly, inter-sectoral community

development programmes will be developed in the provinces geared towards targeting women and youth for economic empowerment and skills development. In this regard the Poverty and Inequality Report-will be used as an important tool to reducing the gap between the governmental programme and poverty needs. On the basis of this, longer term measurable targets will be set.

Creating an enabling environment, consolidating. \hat{A} relationships with NGOa\200\231S and \hat{a} \200\230

develoPing new partnerships

A range of strategic interventions'to improve the functioning of NGOâ\200\231s will be put in

place. The Department is in the process of $\[\] \]$ of $\[\] \]$ new legislation for the not-for-pro $\[\] \]$

sector. Government mechanisms to replace interim mechanisms are being developed and social service personnel retrained to enable the NGO sector to participate in developmental social welfare delivery. A new policy framework for government funding ofNGOâ\200\231s with clear i¬\201mding criteria and a tender system Will be i¬\201malised by May 1997.

From the total annual welfare budget of R12,3 billion, R1,2 billion is for transfers to $NGOa^200^231s$ and national councils for welfare sewices in various communities.

National Crime Prevention Strategy

Our goal is to contribute meaningfully and effectively to the NCPS. This is done through the establishment ofintegrated support services for victim empowezment; the development

.of existing services on governmental and non-governmental level; the disseniq\201nation of finformation on the. abuse of women and children (especially sexual abuse),

procedures; the promotion of voluntarism in victim support work; and the twining of criminal justice and social service personnel for victim empowerment by June 1997

Rehabilitation of Health Facilities

We have recently completed the $i\neg\201rst$ ever audit of all our hospitals. This audit revealed

that 27% of hospitals are in a bad state of disrepair and we need between $R\tilde{A}\otimes Dn$ - RSbn over a pen'od of 8 years to replace these facilities. Our biggest challenge is to develop innovative $\ddot{a} \sim 201$ nancing suategies to fund the replacement and rehabilitation of these hospitals

which are necessary for the delivery of high quality health care.

National Health Bill

A National Health Bill will be tabled in Parliament during this year. This Bill will replace

the current Health Act and establish a legal framework for implementing all the policies developed by the Department.

MINISTRY FOR WELFARE AND POPULATION DEVELOPMENT

2.1

2.2.

â\200\230

OBJECTIVES

A new model for Social Welfare has been established through the white paper process that is consistent with the approach as outlined in the RDP base document. A high level ofpublic participation was achieved and there is a general sense of enthusiasm about the new direction among stakeholder organisations. The vision for welfare is to have a welfare .98th whichfacilitates the development ofhuman capacity and self-Lreliance within a caring and enabling sacio-economic environment.

The. mission statement

commits us to save and build a selï $\neg\$ 201reliant nation in partnership with all stake holder s

through an integrated social welfare system which maximizes its existing potential, and which is equitable, sustainable, accessible, penple centred and developmental. This vision and mission will be realised progressively through the implementation of $\$ \201ve

year strategic plans.

GOALS

The department facilitated a process during 1996 to develop a Social Welfare Aetion Plan (SWAP) for implementation during the <code>i¬\201rst i¬\201ve</code> years. The SWAP will be re<code>i¬\201n</code> ed once

the white paper is $\[\]$ 201nalised by Parliament. The Social Welfare Action Plan, contains the

following geals for the <code>i¬\201rst i¬\201ve years:</code>

.

- 2-2.1 To develop an inclusive, unifying and integrated institutional framework for the delivery of social welfare services in close partnership between the government and all stakeholders with due recognition for diverse needs. .
- 2.2-2 To develop the human resource capacity in the welfare i_{γ} 201eld in close partnership between the government and all key role players.

.

7.. 8.- To develop comprehensive legislation at all levels of guvenmem in close cooperation with stakeholders.

_

2.2.4 To develop a i_2 201nancial and performance management system, which will link policy planning and resource allomtion, monitor and report on $a^200\230$ progress of welfare programmes in respect of the public and private welfare sector.

255 South Aï¬\201â\200\230icans will be trained in agricultural public sector policy analysis

through the EDI/World Bank training programme in the next three years. Local universities will i-201 internalize and take ownership of the training programme with the support of the NDA which will provide bursaries to students.

There has been a conceited $ein\201a\200\230$ ort to redesign $agin\201$ wltural training cum'e ula at agricmltural

colleges with the aim of complementing current de<code>i¬\201ciencies</code> of existing sta<code>i¬\201</code> $^200\231.$ Internships .

and in $200\224$ service' training form the core of the strategy of re-orientating the current

extension sta $\ddot{}$ 202 \hat{a} 200 $\hat{}$ 230. A working group on Extension and Traininghas been establish ed and IS

i-201111y operation in effecting the above.

Farmers and Agribusiness:

International exposure trips to the Asian countries, Latin America and Africa were undertaken with the aim of exposing South Ai-201ican farmers to operational conditions of

fellow farmers in these countries. To complement farmer organization development strategy, there are e<code>i¬\202</code>a $\200\230$ orts to promote commodity producer organisations with the aim of

exposing the core business of such commodities to emerging farmers. Beef, vegetables, sorghum and grape farmers are in the fore $\[\] \] \]$ of such new strategy approaches. The support of national and provincial farmers unions structures is the issue that will be attended in the ensuing year. The NBA will commit $\[\] \] \]$ vegetables, sorghum and grape farmers are in the fore $\[\] \] \]$ of such new strategy approaches. The support of national and provincial farmers unions structures is the issue that will be attended in the ensuing year. The NBA will commit $\[\] \] \]$

programmes during 1997.

So far'four communities have returned to their land: MogOpa, Riemvasmaak, Rooigrond and Elandskloof. This involved approximately 2 500 people. Altogether some 11 000 claims have been received. This number can be misleading because in many instances one claim is represented by a large number of individual claims, particularly in urban areas (eq.

District Six, Cato Manor, Fairview). It is diï¬\201icult to predict future progress because

restitution is dependent on i-201nalisation of the claim by the Land Claims Court. At least

anothef 25 communities should return to their land during 1997; This represents at least a sixfold increase on past achievements. There are two major limiting factors on progress:

the limited capacity of the Commission on Restitution of Land Rights, which has four Commissioners and 58 permanent $stain\201a\200\230$, and the fact that the interim Constitution requires

that every case must be processed by the Commission before the Land Claims Court can deal with it. This creates a bottleneok. Two steps have been taken to deal with this. The Cabinet has approved the Restitution of Land Rights Amendment Bill, Which will make it possible for Claimants to have direct access to the Court, thus removing the bottlenec k-

And the capacity of the Commission is being increased by 40% by the appointment of an additional Commissioner and through the use of donor i-201mds from the Netherlands GOvernment.

b.

c.

. establishment of a legal entity to hold the land;

Redistribution:

A fundamentally new policy has been put developed. A pilot programme was established in each province, and two-year contracts were entered into with provincial governments to run the programmes on an agency basis. These are now coming to an end, and new arrangements have been. negotiated with each province. The redistribution process involves a <code>involves</code> a <code>involves</code>

planning by the community, with the assistance of a planning grant, on how they are to negotiations for the acquisition of land (usually privately owned); use the land;

planning with other Departments

(provincial and national) to provide services to the people; designation of the land for settlement; and transfer of the land. The result is that the budget for 1994/5 and 1995/6 was Very substantially under-spent, as projects started during these years are onlyâ\200 \230 now

coming to fruition. 240 commanitz \hat{a} 200\231es have received planning grants. During 1994 and

1995, 23 projects were designated (this means the project has been planned and approved, $\frac{3}{200}$ and legal entity has been established, and the funds are to be released). The pace

picking up, as the projects come to fruition. During 1996, 3-7projects were designated - 60% more than during the previous two years together. Thus, far, 56 149 ha have been redistributed.

It is anticipated that during 1997, not less than 1,2 million ha willbe distributed through this programme. The Land Reform (Labour Tenants) Act was passed in' 1996.

This gives labour tenants the right to acquire ownership of' land. Land acquisition by labour tenants will start during 1997.

·
,

Tenure reform:

Tenure reform provides security to people who are vulnerable to eviction, and ensures that land is no longer allocated on a basis which discriminates against women. It gives those on the land the security which is necessary to enable them to invest in the land. The

Interim Protection of Informal Rights to Land Act was passed in 1996. This gives protection to the large number of peOple, mainly in the former Bantustans, who can not prove a legal right to the land which they occupy.

MINISTRY OF EDUCATION

3.1/2

GOALS AND'OBJECTIVES

a.

As stated in our White Pallet on Education and Training, the over-arching goal of , policy must be to enable all individuals to have access to lifelong education and training, irrespective ofrace, class, gender, creed or age. This we want to achieve through an integrated approach to education andâ\200\230 training, which links one level oflearning to another, and enables leamers to progress to higher levels from any starting point in the education and training system.

To achieve the Ministry of Education, in collaboration with the Ministry of Labour, has appointed the South Ai-201a200230ican Qualii-201cations Authority, which will

develop the National Qualii¬\201cations Framework (NQF). The Ministry aims at ensun'ng that all levels of the NQP will be in Operation by the year 2004. It is for this reason that the Ministry is targeting 1998 as the $i\neg\201$ rst year for the implementation of the new, outcomesâ\200\224based curriculum. Our target again is that by the year 2004 the new curriculum Will have been implemented at all levels in all grades.

The provision of 10 years of free and compulsory general education is another of our stated goals, and as we say in our White Paper, achieving this goal is central to the national development strategy, with its emphasis on human resource development. Again it is our considered view that we should target 2004 for the full implementation of this. goal.

What this itnplies is that we must extend access into the education system by increasing the number of schools and classrooms. In this regard the Ministry aims to build 5,000 new classrooms by 1999. This will mean that we will have catered for approximately 100 000 more learners.

We will also need to reach out to a number of adult learners. Our aim is to reach '400,000 adult learners through our programmes by 1999.

As part ofour drive to make education accessible to all, we will also address the education needs oflearners with special needs. Our aim is to ensure that by 1999 we have started irnplementing policy recommendations that will have come from the Commission on Learners with Special Education Needs, which is currently workingin this area. We hope this will enable us to begin to reach the majority of learners with Special needs, especially in those areas that have been deprived before, by year 2004.

_ Another major aim is to do away with gender related problems in education, be they related to access or the curriculum. In this regard we home to establish a gender equity unit in education as soon as we have received a report on how this should be done from the task team investing this at the end of 1997.

MJN'ISTRY OF AGRICULTURE

7.1 + 2

GOALS AND OBJECTIVES

The overall aim of the RDP with regard to agriculture is to ensure food security, become competitive and a prosperous economic sector in the country. .aimed at the redisu'ibution of 30% agrieli¬\202tural land. This was seen as a resource. It sees agriculture as an important

element for rural development with the previously disadvantaged farmers as its principal beneï¬\201ciaries. Its speciï¬\201c objectives within agriculture are to:

~

de-racialise the sector,

broaden access of the previously disadvantaged farmers to mainstream agriculture; transform the public sector institutions e.g., civil sendee and parastatal agencies; provide agnwltural support services e.g. research, i¬\201nance, markets, extension and training;

build the human resource capacity of especially the previously disadvantaged communities; and

redistn'bute 30% of agricultural land by 1999.

~

Vision

 ${\rm \hat{a}}\200\230 {\rm market-directed}$ farming sector, characterised by a wide range of farm sizes, whi ch will

be regarded as the central eeonomie and social pivot of rural South Africa and which will in $\[\]$ 102 uence the rest of the economy and society. Its critical policy goals are producti on.

marketing, sustainable utilisation of natural agricultural resources, agricultural i-201 nancing,

institutional in $\ddot{}$ -\201astructure, information and agricultural technology, research, extension

and training. And its specii¬\201c objectives are:

developing a new order of economically viable, market-directed commercial fanners, With family farms as the basis;

the broadening of access to agriculture via land reform should be enhanced by adequate agn'eukural policy instruments, and supported by appropriate means of the provision of appmpriate services;

in\201naneial systems should focus on the resource-poor and beginner farmers, enabling them to purchase land agricultural inputs;

trade in and the marketing of agn'cultural products should reï¬\202ect market tendencies;

agricultural production should be based on the sustainable use of the natural agricultural and water resources; .and

developing agriculture \hat{a} 200\231s important role in the regional development of Southem Africa and other countries.

.

. -~

7.3

RDP TARGETS

Agricultural land redistribution
The RDP Goal isâ\200\230to redistn'bute 30% or 30 milliOn ha of the total 99 million ha agricultural land within the i¬\201rst 5 years of our democratic government. This implies the redistribution of about 6 million ha every year. Available state-owned agriculture land i

about 1 million.

Transforming Public Sector Institutions

20

Government'structures:

Imer-government F0mm on Agriculture together with its technical committees have been established and is fully functional. IPA provides the leadership as well as the secretarial

services on the national agricultural policy process.W"lthin the NDA an Employment Management Team as a change agent has been eStablished with the purpose of ensuring that;

~

~

~

. the employment process within the NDA improves representativeness;

the BATAT process effected a. policy shift and the implementation of new programmes in the department;

the reâ\200\224direction and re-prioritisation of budget to deal with the new policy objectives; $^{\prime}$

the decentralisation of operational $i\neg\201$ xnctions, budget and personnel to provinces and the NDA retaining the policy development $i\neg\201$ metion of establishing norms and standards regarding such decentralised function;

the overseeing function on the implementation of agricultural programmes and policies throughout the country and management of agricultural international relations.

Parastatals and Agencies

There has been a total removal of statutory powers of control boards and the introduction of the new agricultural marketing act There has been a consolidation and restructuring of former bantustan development corporations with the aim of establishing new and single provincial development corporation. There has been a review of development and $i\gamma\$ 201nancial

institutions .with the aim of introducing a more streamlined and an effective rural $\mbox{i}_{\neg} \backslash 201$ nancial

seniees institutions.

е.

Building Human Resource Capacity

Public Servants:

The following has been implemented in the efforts to improve and harness the capacity of public servants to manage their i¬\201tnctions better; viz.

Training of 45 public Servants in banking and rural $in\201$ nancial/credit course under the Cochrane Programme,

 $_$ 18 South Africans will be trained within the next 15-months in food security programme managed by SADC Food Security Unit.

II."

PAGE 19

THE IMPACT OF THE MACRO-ECONOM16 FRANEWORK

Most developing countries have been increasingly obliged to make adjustments in their eco nomies

in response to macroeconomic problems of imbalance between aggregate demand and supply, ini¬\202ation, unemployment, and shortage of foreign exchange. The sources of these problems are-

both external and domestic. This government is doing everything in its power to tighten i ts belt

and rea^200^24 prioritise budget expenditure. Nonetheless our economy continues to be ero ded, the rand

is depreciating unemployment has reached unacceptable levels and more resources are neede d

to provide basic needs such as health, education, housing, water and sanitation t6 the $\ensuremath{\text{ma}}$ jority of

South Africans.

′

Though we support Growth, employment and Redistribution (GEAR) strategy, it must go hand in hand with improvement in revenue collection so that the cut backs on resources available for

provision of social needs are not drastic. We cannot deny the fact that in the short term , the

imminent budget cuts will aï \neg \201ect the delivery ofbasic services adversely. We will experience some

us $\[\]$ us $\[\]$ us of providing a better life for all South A $\[\]$ vicans. We are therefore committed to

operate within the budget constraints and to re-prioritise our budget to ensure that we continue

to provide essential health services which will have maximum impact on the lives of our people.

Ministries regarding the impact of our policies on the $macro \hat{a} \geq 00 \leq 224$ economic framework T hese are:

1.

2.

3.

Health will do' everything to cushion the budget cuts but is concerned that the current funding levels should not be eroded as this will have a major impact on the delivery of , basic health Services. Another challenge faced by the Health Ministry is the funding ofth ${\sf e}$

rehabilitation programme for the health facilities. A recent audit of all our hOSpitals revealed that 27% of our capital stock is in a bad state Of disrepair and would require between R6 - R8bn to replace over a period of 10 years. We are investigating; > innovative means of Tallo 10 years are investigating; > innovative means of Tallo 10 years.

The social sector, particularly education, health and welfare are all concerned that' with the

block grants there is no guarantee that the agreed priorities will be funded. It is critical,

therefore, for the ANC to make sure that those priorities like education, primary health care and social grants, especially for the rural poor families for whom this may be the only

safety net, are guaranteed.

.

The Minisz of Education is perturbed by the budget cuts which are implied in the Mach economic $i\neg\201$ 'amework. If these cuts are real, the implementation of the policy of free and

compulsory general education will be seriously threatened including bridging the backlog.

12

If these targets are reached, a further 1 700 000 people will be served in 1997 and two million in 1998. Where capacity exists the operation of endsting water sapply schemes at local level, particularly in the Northern province and Mpumalanga, will be handed over to local government or water boards. Actions are underway to establish new water boards to ensure effective operation of existing schemes and to promote regional water supply in the following , areas; Mpumalanga Lowveld, Kwazuluâ\200\224Natal Tukela Region, Easter n

cape and Western Cape Peninsula.

Water Services (water supply and sanitation) legislation will be introduced in 1997 to establish a framework whereby central government can establish norms and standards for - the provision of such services and provide the support necessary to local government to achieve the equitable and sustainable provision of services. This will also provide the basis

for the promotion of water conservation at local government level. The programmes is promoted within the policy framework established by the 1994 White Paper on Water Supply and Sanitation. A White Paper on Sanitation Policy was produced on an inter-Ministerial basis in 1996 and a National Sanitation Coordination Oï¬\202iee established to

promote the joint sanitation strategy- During 1996, guidelines on the involvement of the private sector in service provision were issued and are already being applied.

Flood management

The Department successfully switched its attention in 1996 i^2 01'om managing the consequences of drought to dealing with the other extreme of climate - i^2 02ooding. The tragic loss of life in the Xmas of 1995 i^2 02oods in Pietennaxitzburg obscured the overa

success in managing a session of very high rainfall in 1995/6. Through the management of the national dam infrastructure and the issuing of early warnings to a \ddot{a} -\201'ected communities, \ddot{a} -\2020od, damages were kept to a minimum- The management of the \ddot{a} -\2020od in the Veal river was particularly success \ddot{a} -\20111.

National water conservation campaign

The national water conservation campaign is worthy of special mention. The various educational and promotional activities of the campaign continued to raise consciousness about te value of water resources and the $\hat{a}200\230$ Working for Water Programme $\hat{a}200\235$ h as proceeded successfully.

Community forestry

A total of 635 major community forestry projects and 1445 minor projects were initiated throughout the country. The impact of the Community Forestry Programme is evident in the total of 1,9 million trees that have been planted. It is anticipated that the community $\hat{a} \geq 00 \geq 30$

forestry programme will directly promote the planting of approximately 1 million trees ever the next 3 years. Since the introduction of the Community Forestry Programme in 1996, extension $stain\201a\200\230$ fthe Forestry ChiefDirectorate have been involved in initiating and

overseeing community forestry projects of various kinds, such as woodlots (community and individual), community nurseries, home nurseries, windbreaks, school greening and many more. Excess stafffrom the commercial forestry operations in the former homelands are being reâ $200\224$ deployed in community forestry activities. â\200\230
